Sharepoint 2010: Get

Document Set via SOAP Request - Stack ... SharePoint 2010 has introduced a better method for storing these documents in one of their new

features, Documents Set. A Document Set groups files together but also give you the option to create additional attributes associated with each set enabling you to find

the set of documents you are looking for more efficiently. These attributes are known as “ Metadata ” which can be synchronized between the Document Set and all the files with in it.

Document set inside document set

Create and manage Document Sets - SharePoint

SharePoint search was already configured and, actually, I could search within document sets, by doing a site wide search and then using the refinement panel (on the left hand side of a search result page in a search center) to narrow it down to my document set. What I wanted to do was perform this search directly from a search

box.

Questions about

SharePoint 2010 customizations can be answered here: ...

Please have a look at this post, where it is suggested to create a new Document Set Content type of parent content type (existing DS) and use that one for New Form and use Existing

one for other forms.

Hide columns in Document Set New form

Document Sets let you create a collection of related documents, and have SharePoint treat them as one unit. For example, you might collect all the items that you need for a sale - a sales contract, a bill of materials, engineering specs, and so on - and store them as the Contoso sale Document Set.

[Working With Tags and Comments in SharePoint 2010](#)

Document sets are a new investment area in Microsoft SharePoint

Server 2010 that are designed to manage all aspects of work products. They provide a user interface (UI), metadata options, behaviors, and object model elements that fill a gap in the hierarchy of containers between documents and sites.

From your description, an exception occurred when adding a comment to a document set. Please check the steps below: 1. Check the List whether have a lookup column. 2. If so, please check the Lookup field whether set to hidden. 3. Use "Document" instead of "Document Set". Here is a thread for you to take a look at, it talk about the same exception. [How to Create and Use Document Sets in](#)

[SharePoint 2010](#)
In SharePoint 2010, there is a new feature called document sets which allows users to group different kind of documents under a single set. It also allows the defining of metadata, attributes and workflows on a document set. In this article, we will show you how to create and use document sets inside a document library.

Already in use internally in Microsoft and by some of the company's clients who are

doing proof of
concept trials
with SharePoint
2010 beta,
Document Sets
sit between
documents and
sites.
