Throughout the book, theoretical foundations necessary for understanding Electronic Commerce (EC) are presented, ranging from consumer behavior to the economic theory of competition. Furthermore, this book presents the most current topics relating to EC as described by a diversified team of experts in a variety of fields, including a senior vice president of an e-commerce-related company. The authors provide website resources, numerous exercises, and extensive references to supplement the theoretical presentations. At the end of each chapter, a list of online resources with links to the websites is also provided. Additionally, extensive, vivid examples from large corporations, small businesses from different industries, and services, governments, and nonprofit agencies from all over the world make concepts come alive in Electronic Commerce. These

examples, which were collected by both academicians and practitioners, show the reader the capabilities of EC, its cost and justification, and the innovative ways corporations are using EC in their operations. In this edition (previous editions published by Pearson/Prentice Hall), the authors bring forth the latest trends in e-commerce, including social businesses, social networking, social collaboration, innovations, and mobility.

The Internet Corporation for Assigned Names and Numbers (ICANN), founded in 1998, is a not-for-profit public-benefit

corporation established to ensure a stable and secure global Internet. As the custodian of the Domain Name System (DNS), one of its key responsibilities is the introduction and promotion of competition in Internet-related markets, an aim which ICANN has tried to achieve through the delegation of generic top-level domains (gTLDs). This book investigates how successful ICANN has been in achieving this goal. Over the years, ICANN has been required to decide on a substantial number of complaints from applicants for gTLDs related to capture, arbitrariness, discrimination, and unwarranted restriction of competition. This book is the first detailed study of complaints related to ICANN decisions that have been brought using ICANN's Independent Review Process (IRP). The authors - preeminent expert practitioners in international litigation and arbitration related to Internet governance - take a close look at how ICANN has handled the major issues raised and how ICANN has shaped its own accountability mechanisms. The book also weighs the influence of external accountability on ICANN's decision-making process and considers the

implications of third-party decisions (such as IRP decisions) for the ongoing development of the Internet. This authoritative analysis covers:

- the regulatory framework governing ICANN and the introduction of new gTLDs in a historic perspective;
- ICANN's accountability framework;
- all the IRP cases that have been decided to date, with an in-depth analysis of those cases that have become reference decisions in the latest application round; and
- the 2016 amendments to ICANN's articles of incorporation and bylaws, concentrating on the problems that remain unresolved. This work is a welcome addition to the debate on how to address the shortcomings in ICANN's accountability in the interests of the global Internet community. The authors make concrete proposals and recommendations, suggesting changes to ICANN's regulatory framework in the light of the lessons learned and with a view to preventing similar problems arising in a next round of gTLD applications. This book has the potential to become the Green Book for fundamental changes to ICANN's accountability framework.

Researchers developed two scenarios to envision the future of mobility in China in 2030. Economic growth, the presence of constraints on vehicle ownership and driving, and environmental conditions differentiate the scenarios. By making potential long-term mobility futures more vivid, the team sought to help decisionmakers at different levels of government and in the private sector better anticipate and prepare for change.

Principles of Economics is designed for a two-semester principles of economics sequence. The text has been developed to meet the scope and sequence of most introductory courses. At the same time, the book includes a number of innovative features designed to enhance student learning. Instructors can also customize the book, adapting it to the approach that works best in their classroom. The pedagogical choices, chapter arrangements, and learning objective fulfillment were developed and vetted with feedback from educators dedicated to the project. They thoroughly read the material and offered critical and detailed commentary. The outcome is a balanced approach to micro and macro economics, to both Keynesian and classical views, and to the theory and application of economics concepts. Current events are treated in a politically-balanced way as well.

This new Edition of Electronic Commerce is a complete update of the leading graduate level/advanced undergraduate level textbook on the subject. Electronic commerce (EC) describes the manner in which transactions take place over electronic networks, mostly the Internet. It is the process of electronically buying and selling goods, services, and information. Certain EC applications, such as buying and selling stocks and airline tickets online, are reaching maturity, some even exceeding non-Internet trades. However,

EC is not just about buying and selling; it also is about electronically communicating, collaborating, and discovering information. It is about e-learning, e-government, social networks, and much more. EC is having an impact on a significant portion of the world, affecting businesses, professions, trade, and of course, people. The most important developments in EC since 2014 are the continuous phenomenal growth of social networks, especially Facebook, LinkedIn and Instagram, and the trend toward conducting EC with mobile devices. Other major developments are the expansion of EC globally, especially in China where you can find the world's largest EC company. Much attention is lately being given to smart commerce and the use of AI-based analytics and big data to enhance the field. Finally, some emerging EC business models are changing industries (e.g., the shared economy models of Uber and Airbnb). The 2018 (9th) edition, brings forth the latest trends in e-commerce, including smart commerce, social commerce, social collaboration, shared economy, innovations, and mobility.

External powers commonly play a major role in efforts to break patterns of conflict and to instal stable and durable peace settlements. They do this not just by underwriting security arrangements, but also by being available to intervene at critical moments. This book considers the special (but by no means unique) case where the conflict is located in a region of one state over which a neighbouring state has had a territorial claim, itself part of the legacy of a quasi-colonial relationship: Northern Ireland. This book focuses on the changes in the British state, whose writ of course extends over Northern Ireland, but also the Irish state, which surrendered a strong formal but ineffective claim to jurisdiction over Northern Ireland for the reality of a significant voice in its political future. These were ultimately to facilitate the process of settlement leading to the 1998 Good Friday Agreement, and the later transformation of institutions and political relations in Northern Ireland and in these islands more generally. It innovates by using a new oral archive built up over the past decade. The book explores the interrelations of different levels of state and institutional change. These interrelations range from the broadest concepts of sovereignty and ideology

to the actual impact of large changes on particular institutions and laws. They also extend over elite political assumptions and strategies, and inter-state coordination practices. This book was published as a special issue of Irish Political Studies.
