presented here show a small selection of the wide range of current research topics in the

field of marketing and communication. The spectrum of topics ranges from leadership communication, communication in agile organisations and tweeting CEOs to new developments in e-learning and current requirements for online shareholder meetings to sustainable consumer behaviour, communication in times of home office and new aspects of social media topics. All contributions were presented orally at the international online conference "Trends in Business Communication" on 4 December 2020, the full papers were subjected to a peer review process.

New Directions in

Wireless Communications

Research addresses critical issues in the design and

performance analysis of current and future wireless system design.

Intended for use by system designers and academic researchers, the contributions are by acknowledged international leaders in their field. Topics covered include:

- (1) Characterization of wireless channels;
- (2) The principles and challenges of OFDM;
- (3) Low-correlation sequences for communications;
- (4) Resource allocation in wireless systems;
- (5) Signal processing for wireless systems, including iterative

systems
collaborative
beamforming and
interference
rejection and
network coding; (6)
Multi-user and

standard proposals
such as UMB. With
chapters from some
of the leading
researchers in the
field, this book is
an invaluable
reference for those

Communication research is
evolving and changing in a
world of online journals,
open-access, and new ways
of obtaining data and
conducting experiments via
the Internet. Although there
are generic encyclopedias
describing basic social
science research
methodologies in general,
until now there has been no
comprehensive A-to-Z
reference work exploring
methods specific to
communication and media
studies. Our entries,
authored by key figures in
the field, focus on special
considerations when
applied specifically to
communication research,
accompanied by engaging
examples from the
literature of communication,
journalism, and media
studies. Entries cover
every step of the research
process, from the creative
development of research
topics and questions to
literature reviews,
selection of best methods
(whether quantitative,
qualitative, or mixed) for
analyzing research results
and publishing research
findings, whether in
traditional media or via new
media outlets. In addition to
expected entries covering
the basics of theories and

methods traditionally used in
communication research,
other entries discuss
important trends influencing
the future of that research,
including contemporary
practical issues students
will face in communication
professions, the influences
of globalization on research,
use of new recording
technologies in fieldwork,
and the challenges and
opportunities related to
studying online multi-media

only as topics of research
but also as means of
collecting and analyzing
data. Still other entries
delve into considerations of
accountability, copyright,
confidentiality, data
ownership and security,
privacy, and other aspects
of conducting an ethical

The 4th edition of the Handbook of Research on Educational

Communications and Technology expands upon the previous 3 versions, providing a comprehensive update on research pertaining to new and emerging educational technologies.

Chapters that are no longer pertinent have been eliminated in this edition, with most chapters being completely rewritten, expanded, and updated. Additionally, new chapters pertaining to research methodologies in educational technology have been added due to expressed reader interest. Each chapter now contains an extensive literature

review, documenting and explaining the most recent, outstanding research, including major findings and methodologies employed. The Handbook authors continue to be international leaders in their respective fields; the list is cross disciplinary by design and great effort was taken to invite authors outside of the traditional instructional design and technology community. The Internet of Things (IoT) has attracted much attention from society, industry and academia as a promising technology that can enhance day to day activities, and the creation of new business models, products and services, and serve as a broad source of research topics and ideas. A future digital society is envisioned, composed of numerous wireless connected sensors and devices. Driven by huge demand, the massive IoT (mIoT) or massive machine type communication (mMTC) has been identified as one of the three main communication scenarios for 5G. In addition to connectivity, computing and storage and data management are also long-standing issues for low-cost devices and

sensors. The book is a collection of outstanding technical research and industrial papers covering new research results, with a wide range of features within the 5G-and-beyond framework. It provides a range of discussions of the major research challenges and achievements within this topic.

This edited book delves into important current issues and trends in internal communication from a strategic communication perspective. It presents recent research findings, theories, best practices, and cases in internal communication on a global scale. The book discusses emerging and important long-standing issues in-depth, including topics such as employee advocacy, internal social media, internal issue management and crisis communication, employee activism, purposeful communication, leadership communication, internal CSR communication, cross-cultural/global internal communications, internal communication,

and employee well-being. Within these topics, the chapters address the function of internal communications in contemporary times, the role of leaders, how to integrate emerging technologies, building an internal brand, and measuring the effectiveness of internal communication. This book will be a comprehensive source on internal communication, especially on its new theoretical development related to the emerging issues and trends, best practices, and future directions for research and practice.

Intercultural
communication is a daily
occurrence for most
people, as a result of
transnational population
flows and globalized
media. The contributions
to this volume propose

reconceptualizations of
orthodox accounts of
intercultural
communication based on
supposed national cultural
characteristics. They
approach the subject from
a variety of angles,
including intercultural
communication training,
the role of power in
intercultural negotiations,
the linguistic situation in
Europe, and the conflict
between nationalist and
transnational discourses
in literature. The articles
consider the need for a
revision of the notions of
culture and
communication given
multicultural and
multilingual environments
such as universities; the
use of English as a lingua
franca in Europe; how
collaborative discourse
can reshape power
relations; the importance
of social intelligence in
intercultural
communication; cultural
and linguistic influences
on conceptual metaphors
and their translation; and
the way Irish and Galician
women poets negotiate
competing ideologies such
as nationalism, feminism,
Celticism and Catholicism.

Science and technology are embedded in virtually every aspect of modern life. As a result, people face an increasing need to integrate information from science with their personal values and other considerations as they make important life decisions about medical care, the safety of foods, what to do about climate change, and many other issues. Communicating science effectively, however, is a complex task and an acquired skill. Moreover, the approaches to communicating science that will be most effective for specific audiences and circumstances are not obvious. Fortunately, there is an expanding science base from diverse disciplines that can support science communicators in making these determinations. Communicating Science Effectively offers a research agenda for science communicators and researchers seeking to apply this research and fill gaps in knowledge about how to communicate effectively about science, focusing in particular on issues that

are contentious in the public sphere. To inform this research agenda, this publication identifies important influences – psychological, economic, political, social, cultural, and media-related – on how science related to such issues is understood, perceived, and used. New Directions in Wireless Communications Research John Wiley & Sons

During the last decade there was a shift from wireless and mobile communications technology, networks and applications towards

integration of radio with other disciplines. Integration of navigation, sensing and services allow for entering new areas in which many requirements from individuals and organizations are satisfied. Potential applications are manifold. Developments for realizing these new application areas will cause a boost on new systems demonstrating the potentials of this integration approach. In this first book the fundamentals of this new approach on integrated communication, navigation, sensing and services (Conasense) will be elucidated. Furthermore, several applications illustrate some of the aims of Conasense. Two major areas have been selected 1. Quality of life 2. Intelligent Conasense architectures

Topics in the book on 'quality of life' include: • Visionary plans on health, security, neurophysics, indoor and outdoor safeguarding: in all these areas new Conasense technology and systems are essential. Topics in the book on intelligent Conasense architectures

concern: • a framework describing novelties in Conasense technology needed to realize the aimed improve in 'quality of life'. • Breakthroughs on full integration of space-based and terrestrial communication and navigation systems with advanced high resolution sensing of the local environment supplemented with geographical information at regionals, national and international scales. A hands-on guide for applying research methods to common problems, issues, projects, and questions that communication practitioners deal with on a regular basis, this text demonstrates the relevance of research in professional roles and communication careers. The second edition features updated material that covers major communication research methods including surveys, experiments, focus groups, observation research, while also providing key background information on ethics, validity, reliability,

concept explication, statistical analysis, and other current topics. It continues to foster student engagement with research through its numerous features and practical activities, including: Research in Depth – examples of methods as applied in scholarly research Reflect and React – problems and issues that promote reflection and discussion Voices from Industry – Q&As with professionals working in communication industries End-of-unit activities – exercises that reinforce concepts and content The text is ideally suited to both undergraduate and graduate courses in mass communication research methods.
