There are many distinct pleasures associated with computer programming. Craftsmanship has its quiet rewards, the satisfaction that comes from building a useful object and making it work. Excitement arrives with the flash of insight that cracks a previously intractable problem. The spiritual quest for elegance can turn the hacker into an artist. There are pleasures in parsimony, in squeezing the last drop of performance out of clever algorithms and tight coding. The games, puzzles, and challenges of problems from international programming competitions are a great way to experience these pleasures while improving your algorithmic and coding skills. This book contains over 100 problems that have appeared in previous programming contests,

along with discussions of the theory and ideas necessary to attack them. Instant online grading for all of these problems is available from two WWW robot judging sites. Combining this book with a judge gives an exciting new way to challenge and improve your programming skills. This book can be used for self-study, for teaching innovative courses in algorithms and programming, and in training for international competition. The problems in this book have been selected from over 1,000 programming problems at the Universidad de Valladolid online judge. The judge has ruled on well over one million submissions from 27,000 registered users around the world to date. We have taken only the best of the best, the most fun, exciting, and interesting problems available.

The PC Engineer's

Reference Book John

Wiley & Sons

Prepare to have your

conception of truth rocked

to its very foundation. It is

the year 2004. Violent

crime is the number one

political issue in America.

Now, the Swift and Sure

Anti-Crime Bill guarantees

a previously convicted

violent criminal one fair

trial, one quick appeal,

then immediate execution.

To prevent abuse of the

law, a machine must be

built that detects lies with

100 percent accuracy.

Once perfected, the Truth

Machine will change the

face of the world. Yet the

race to finish the Truth

Machine forces one man

to commit a shocking act

of treachery, burdening

him with a dark secret that

collides with everything he

believes in. Now he must

conceal the truth from his

own creation . . . or face

his execution. By turns

optimistic and chilling--and

always profound--The

Truth Machine is nothing

less than a history of the

future, a spellbinding

chronicle that resonates

with insight, wisdom . . .

and astounding possibility.

Start-up Nation

START-UP NATION

addresses the trillion dollar question: How is it that Israel-- a country of 7.1 million, only 60 years old, surrounded by enemies, in a constant state of war since its founding, with no natural resources-- produces more start-up companies than large, peaceful, and stable nations like Japan, China, India, Korea, Canada and the UK? With the savvy of foreign policy insiders, Senor and Singer examine the lessons of the country's adversity-driven culture, which flattens hierarchy and elevates informality-- all backed up by government policies focused on innovation. In a world where economies as diverse as Ireland, Singapore and Dubai have tried to re-create the "Israel effect", there are entrepreneurial lessons well worth noting. As America reboots its own economy and can-do spirit, there's never been a better time to look at

this remarkable and resilient nation for some impressive, surprising clues.
