This book presents a new model of vowel perception and production derived from visual cues identified in waveform displays. In addition to describing waveform displays of vowels beyond previous descriptions, included in the book are descriptions of experimental evidence supporting near 100% vowel identification

accuracy across 20 male talkers using the concepts in the model. The book content will be of interest to several academic fields including Cognitive Science, Psychology, Linguistics, Speech and Hearing, Language Acquisition, Neurolinguistics, Phonetics, and areas within Physics and Mathematics. Beyond these academic fields, the new model of vowel perception presented here could possibly be used to improve accuracy and speed within existing speech recognition systems, or it could be used to generate a new speech recognition program. Many speech recognition programs are based on simple statistical programs like Hidden Markov Models that ignore any theoretical basis to speech recognition. The Waveform Model differs from the HMM approaches since it has a theoretical basis rooted in articulation and that has potentially more promise than these simple HMM models that just take overall similarities in waveforms and try to match them to phonemes and words. Furthermore, many of the speech recognition programs use extensive training by a single user (in quiet conditions) in order to attain over 90% accuracy, which is still a relatively poor performance. The Waveform Model requires no training, can be used across talkers, and has accuracy above reported speech recognition performance (specific to vowels). In summary, the Waveform Model is innovative, and new to the literature and research communities.

DIVAn incisive, unflinching account of the shocking, summer 2007 Connecticut crime that is still making national headlines, *Murder in Connecticut* examines what happened to Dr. William Petit, his wife Jennifer Hawke-Petit, and their two daughters, Hayley and Michaela, in the early morning hours of July 23 in the quiet town of Cheshire--and how their community rallied bravely around the sole survivor of this vicious home invasion. Who was the Petit family? How were they marked for murder by their killers, Joshua Komisarjevsky and Steven Hayes? How could these men have dreamed up such a crime? And will these horrifying murders--with startling similarities to the case in Truman Capote's classic *In Cold Blood*--really be the impetus behind sweeping parole reform laws that will not only affect Connecticut, but all of America? /div
