Opposites Attract...and can thrive in a marriage built on God. The book starts with the results of a survey detailing the ten most important qualities that each man or woman wants in a spouse, then teaches us how we can be the person who breeds that quality in our husband or wife. Throughout the book the authors use their own personalities and experience with marriage

to demonstrate how to do marriage right. *The Crazy Country Club Database Professional's Librar*

"Based on the American Chemical Society's Second Symposium on Advances in Hydrotreating Catalysts, held in Washington, D.C. Offers comprehensive coverage of the most recent progress in catalysis by transition metal sulfides for the creation of more environmentally safe catalysts and processes. Written by over 70 acclaimed experts from various fields."

A Practical Guide to Data Visualization, Advanced Data Mining Methods, and Applications American College of Physicians

The work of Seattle-based architect Tom Kundig has been called both raw and refined, as well as super-crafted and warm. Kundig's projects, especially his houses, uniquely

combine these two seemingly disparate sets of beauty.

characteristics to produce some of the most inventive structures found in the architecture world today. Kundig's internationally acclaimed work is inspired by both the industrial structures with which he grew up in the Pacific Northwest and the vibrant craft cultures that are fostered there. His buildings uniquely meld industrial sensibilities and materials such as Cor-ten steel and concrete with an intuitive understanding of scale. As Kundig states, "The idea is insuperable from the fabrication, inseparable from the materials used." Tom Kundig: Houses presents five projects in depth, from their early conceptual sketches to their final lovingly wrought, intimate details. Kundig's houses reflect a sustained and active collaborative process between designer, craftsmen, and owners, resulting in houses that bring to life the architect's intentions, the materials used, and lines of unforgettable

When death washes ashore on reality TV, who's to blame? "When I heard the premise of Cut Reality, I almost died...and I wouldn't lie about that." - Jonny Fairplay, Survivor NSFW
Join Jason DeBord as he seeks clarity following the death of a reality TV co-star and

ends up uncovering criminal conspiracy. When Jason returned home from competing on *Beached* he'd lost weight, couldn't sleep, and felt more alone than ever. But, he expected those changes. Jason had no way to predict that one of his fellow competitors would fling himself from a cliff. Unless he didn't. Jason can't believe it, but the network broadcasts the alleged suicide to the world, so he pushes forward in his own amateur investigation. Met with resistance from the cast and crew, he persists only through the support of his developing romance with Blake, a psychologist who observes alarming similarities between her patient and her partner. Events in *Cut Reality* have a variety of interpretations. While under the watchful eye of the public, Jason has to decide: is what he uncovers too coincidental to be true, or so hard to accept because it's his new reality. Buy Zack Hacker's anticipated debut novel to find out what Jason discovers...

What critics are saying: "On the surface, *Cut Reality* is a murder mystery; but actually it is much more...Highly recommended for those who like their intrigue steeped in philosophical insights and dilemmas." - Midwest Book Review "[Zack Hacker] makes poignant critiques though subtle plot developments, holding back from judging society at large, but willing to poke holes in some of our accepted values...From the first tension-filled scene...*Cut Reality* will keep readers guessing, but also leave them with plenty to think about." - SPR "The perfect genre book at the perfect time." - San Francisco Book Review "*Cut Reality* is the type of thoughtful, provocative work that you don't see much of in the reality TV fanbase anymore. I had a lot of fun reading it." - Mario Lanza, author of *When It Was Worth Playing For*, *The Funny 115*, and host of *Survivor Historians* "????? I have always loved books that can surprise me - this book did that and

more." - Readers' Favorite Reviews

OpenGL ES 3.0 Programming Guide Pearson Education

A hands-on guide to making valuable decisions from data using advanced data mining methods and techniques This second installment in the Making Sense of Data series continues to explore a diverse range of commonly used approaches to making and communicating decisions from data. Delving into more technical topics, this book equips readers with advanced data mining methods that are needed to successfully translate raw data into smart decisions across various fields of research including business, engineering, finance, and the social sciences. Following a comprehensive introduction that details how to define a problem, perform an analysis, and deploy the results, Making Sense of Data II addresses the following key techniques for advanced data analysis: Data Visualization

reviews principles and methods for understanding and communicating data through the use of visualization including single variables, the relationship between two or more variables, groupings in data, and dynamic approaches to interacting with data through graphical user interfaces. Clustering outlines common approaches to clustering data sets and provides detailed explanations of methods for determining the distance between observations and procedures for clustering observations. Agglomerative hierarchical clustering, partitioned-based clustering, and fuzzy clustering are also discussed. Predictive Analytics presents a discussion on how to build and assess models, along with a series of predictive analytics that can be used in a variety of situations including principal component analysis, multiple linear regression, discriminate analysis, logistic regression, and Naïve Bayes. Applications demonstrates the

current uses of data mining across a wide range of industries and features case studies that illustrate the related applications in real-world scenarios. Each method is discussed within the context of a data mining process including defining the problem and deploying the results, and readers are provided with guidance on when and how each method should be used. The related Web site for the series (www.makingsenseofdata.com) provides a hands-on data analysis and data mining experience. Readers wishing to gain more practical experience will benefit from the tutorial section of the book in conjunction with the Traceis™ software, which is freely available online. With its comprehensive collection of advanced data mining methods coupled with tutorials for applications in a range of fields, Making Sense of Data II is an indispensable book for courses on data analysis and data mining at the upper-

undergraduate and graduate levels. It also serves as a valuable reference for researchers and professionals who are interested in learning how to accomplish effective decision making from data and understanding if data analysis and data mining methods could help their organization.

Hydrotreating Technology for Pollution Control Spectra

Written by a practicing business attorney with startup experience in the environmental and technology sectors, this comprehensive handbook assists entrepreneurs in tackling the wide variety of opportunities to go green. A one-stop resource for entrepreneurs, it helps readers incorporate clean technology, environmental practices, and green business approaches into the work environment. The book discusses how to

sell to utilities, explores fundraising outlets for green businesses, covers government incentives, presents key startup tools aimed at green businesses, and addresses challenges of many new businesses, such as raising money and making sales. Additional resources are available on the book's website.
