Pneumatic Comparators uses air as a means of magnification in

metrology. This was originally developed by the Solex

Company in France for the calibration of carburetors. The first

application was the checking of the bores of motor-car cylinder

blocks. Now it is almost used in production shop for this

purpose. Working Principle: The Pneumatic Comparator is

based on Bernoulli's theory. The ...

The general principle of the comparator is to indicate the

difference in size between the standard and work being

measured by means of some pointer on the scale with sufficient

magnification. Comparators can give precision measurements,

with consistent accuracy by eliminating human error.
