The Kid's User Guide to a Human Life
Book One: An Open Mind offers ten- to fifteen-year-olds fun, practical information and skills on how to live a life with less stress and more joy. Through educational illustrations and inspiring text, kids are encouraged to take control of their own mental and emotional wellbeing. Rebecca Brenner has spent the last fourteen years, personally and professionally, doing just this. Through her integrative health consulting business she works with

individuals, families, and community organizations to create lasting wellness plans that encourage healthy, happy living. In her popular yoga and meditation classes she teaches mindfulness techniques to everyone from nine to eighty-nine years old. She also consults with parents on how to develop and encourage healthy habits for their children and families. **The Kid's User Guide to a Human Life** **Book One: An Open Mind** is short, inspiring, and fun to read. With fifty illustrations, it focuses on how the brain and nervous system take in information and

directions from the internal chatter of the mind. Most kids (and adults) are unaware of how repetitive and negative their own internal chatter can be. When left unchecked, this internal chatter can wreak havoc on their health and life. The Kid's User Guide to a Human Life Book One: An Open Mind will share how easy it is to be mindful of habitual mind chatter and how doing so creates a spacious, open quality of mind and life. Kids will learn to question what their mind is saying about themselves and others and how to hold lovingly what they find in the

clearness of their own open mind. There is no better way to throw open the doors and adventure confidently and joyously into a happy and healthy life! University of Regina Press Michael Swanson's online discussions with literally thousands of NexStar owners made it clear that there was a desperate need for a book such as this — one that provides a complete, detailed guide to buying, using and maintaining NexStar telescopes. Although this book is highly comprehensive, it is suitable for beginners — there is a chapter on "Astronomy Basics"

— and experts alike. Celestron's NexStar telescopes were introduced in 1999, beginning with their first computer controlled "go to" model, a 5-inch. More models appeared in quick succession, and Celestron's new range made it one of the two dominant manufacturers of affordable "go to" telescopes. Silence is essential for the health and well-being of humans and the environment in which they live. Yet silence has almost vanished from our lives and our world. Of all the books that claim to be about silence, this is the only one that

addresses silence directly. Silence: A User's Guide is just what the title says: it is a guide to silence, which is both a vast interior spaciousness, and the condition of our being in the natural world. This book exposes the processes by which silence can transfigure our lives--what Maggie Ross calls "the work of silence"; it describes how lives steeped in silence can transfigure other lives unawares. It shows how the work of silence was once understood to be the foundation of the teaching of Jesus, and how this teaching was once an intrinsic part of Western Christianity; it

describes some of the methods by which the institution suppressed the work of silence, and why religious institutions are afraid of silence. Above all, this book shows that the work of silence gives us a way of being in the world that is more than we can ask for or imagine.
