[CodeChef](#)

A compiler is a computer

program that translates computer code written in one programming language (the source language) into another language (the target language). The name compiler is primarily used for programs that translate source code from a high-level programming language to a lower level language (e.g., assembly language, object code, or machine code) to create an executable program.

Compiler Solutions

In Solution Explorer, choose multiple files that have can be

compiled actions, open the shortcut menu for one of those files, and then choose Compile. If the files have dependencies, the files will be compiled in dependency order. The compile operation will fail if the files require a precompiled header that isn't available when you compile.

Compiler Internet Solutions

A compiled language is a programming language whose implementations are typically compilers (translators that generate machine code from source code), and not interpreters (step-by-step executors of source code,

where no pre-runtime translation takes place).. The term is somewhat vague. In principle, any language can be implemented with a compiler or with an interpreter.
