Ever since Physical
Chemistry was first
published in 1913
(then titled Outlines
of Theoretical
Chemistry, by
Frederick Getman),

it has remained a
highly effective and
relevant learning
tool thanks to the
efforts of physical
chemists from all
over the world.
Each new edition
has benefited from
their suggestions
and expert advice.
The result of this
remarkable tradition
is now in your
hands. Now revised
and updated, this
Fourth Edition of
Physical Chemistry
by Silbey, Alberty,
and Bawendi
continues to present
exceptionally clear
explanations of
concepts and
methods. The basic
theory of chemistry
is presented from
the viewpoint of
academic physical
chemists, but
detailed discussions
of practical
applications are

integrated throughout. The problems in the book also skillfully blend theory and applications. Highlights of the Fourth Edition: A total of 170 computer problems appropriate for MATHEMATICTM, MATHCADTM, MATLABTM, or MAPLETM. Increased emphasis on the thermodynamics and kinetics of biochemical reactions, including the denaturation of proteins and nucleic acids. Expanded coverage of the uses of statistical mechanics, nuclear magnetic relaxation, nanoscience, and oscillating chemical reactions. Many new tables and figures throughout

the text.

This Student

Solutions Manual provides complete solutions to selected problems from Connally's *Functions Modeling Change, 2nd Edition*. These solutions will help you develop strong problem solving skills. From the Calculus Consortium based at Harvard University, *Functions Modeling Change, 2nd Edition* prepares

readers for the study of calculus, presenting families of functions as models for change. These materials stress conceptual understanding and multiple ways of representing mathematical ideas. The focus throughout is on those topics that are essential to the study of calculus and these topics are treated in depth. *Complete Solutions*
