Does Basel Compliance Matter for Bank Performance? World Bank Publications

This paper makes use of the IMF's Database for Monitoring Fund Arrangements (MONA) to investigate whether transition countries that more successfully implement the conditionality of IMF programs tend to show a better performance on recovery and growth. It is not possible to determine a clear-cut relationship between the index that determines the level of compliance with structural benchmarks in IMF programs and growth. However, the paper finds a definite, positive relationship between the index of compliance with performance criteria and growth, even after controlling for the extent of stabilization of the transition countries.

Digitalization to Improve Tax Compliance: Evidence from VAT e-Invoicing in Peru International Monetary Fund

Recent decades have witnessed important progress in strengthening tax systems in developing countries. Yet many areas of reform have remained stubbornly resistant to major improvements; overall revenue collection still falls short of what is needed to support effective governance and service delivery, while tax collection is too often characterized by high rates of evasion among large corporations and the rich and disproportionate, though often hidden, burdens on lower-income groups. As countries around the world deal with large COVID-19-induced debt burdens, a focus on strengthening tax systems is especially timely. Innovations in Tax Compliance draws on recent research and experience to present a new conceptual framework to guide more effective approaches to reform. Building on the achievements of recent decades, it argues for an expanded focus on the overlapping goals of building trust, navigating political resistance, and tailoring reform to unique local contexts through a focus on identifying the most binding constraints on reform. This focus, it argues, can lead not only to greater compliance, increased fairness, and higher revenues, but can also contribute to the building of state capacity, sustained political support for further reforms, and stronger fiscal contracts between citizens and governments.

The Defense Contract Audit Agency (DCAA) provides auditing, accounting, and financial advisory services in connection with DoD and other fed. agency contracts and subcontracts.

DCAA has elected to follow generally accepted gov t. auditing standards (GAGAS). These standards provide guidelines to help gov t. auditors maintain competence, integrity, objectivity, and independence in their work. There were hotline complaints related to alleged failures to comply with GAGAS on 14 DCAA audits. It was alleged that: (1) working papers did not support reported opinions; (2) supervisors dropped findings and changed audit opinions without adequate evidence; and (3) sufficient work was not performed to support audit conclusions and opinions. Book & CD. This book is designed primarily for undergraduate and postgraduate students intending to pursue a career in internal auditing, as well as those chartered accountants with a specialist interest in governance and control issues. This book covers the basic concepts, philosophy and principles underlying the practice of internal auditing -- the relationships between the internal auditor, management and the external auditor. In addition, the student will gain a knowledge and understanding of the nature of an organisation. Risk management and the role of internal auditing in managing organisational risks in the context of current developments in corporate governance in both the public and private sectors are dealt with. The book is now prescribed for those studying for the Certified Internal Auditor professional qualification since it addresses the syllabus requirements of the Institute of Internal Auditors (IIA) and the Standards for the Professional Practice of Internal Auditing and Competency Framework for Internal Auditors. This book represents a practical integrated approach to the Institute of Internal Auditors' recommended internal audit approach, and may be implemented within an internal audit department in a cost-effective manner. Accordingly, the text may be useful as a reference manual for internal audits in practice.

The global financial crisis underscored the importance of regulation and supervision to a well-functioning banking system that efficiently channels financial resources into investment. In this paper, we contribute to the ongoing policy debate by assessing whether compliance with international regulatory standards and protocols enhances bank operating efficiency. We focus specifically on the adoption of international capital standards and the Basel Core Principles for Effective Bank Supervision (BCP). The relationship between bank efficiency and regulatory compliance is investigated using the (Simar and Wilson 2007) double bootstrapping approach on an international sample of publicly listed banks. Our results indicate that overall BCP compliance, or indeed compliance with any of its individual chapters, has no association with bank efficiency.

This paper proposes an empirical framework that distinguishes voluntary from involuntary compliance with fiscal deficit targets on the basis of economic, institutional, and political factors. The framework is applied to Spain 's Autonomous Communities (regions) over the period 2002-2015. Fiscal noncompliance among Spain 's regions has shown to be persistent. It increases with the size of growth forecast errors and the extent to which fiscal targets are tightened, factors not fully under the control of regional governments. Non-compliance also tends to increase during election years, when vertical fiscal imbalances accentuate, and market financing costs subside. Strong fiscal rules have not shown any significant impact in containing fiscal non-compliance. Reducing fiscal non-compliance in multilevel governance systems such as the one in Spain requires a comprehensive assessment of intergovernmental fiscal arrangements that looks beyond rules-based frameworks by ensuring enforcement procedures are politically credible.

Global value chains (GVCs) are a key feature of the global economy in the 21st century. They show how international investment and trade create cross-border production networks that link countries, firms and workers around the globe. This Handbook describes how GVCs arise and vary across industries and countries, and how they have evolved over time in response to economic and political forces. With chapters written by leading interdisciplinary scholars, the Handbook unpacks the key concepts of GVC governance and upgrading, and explores policy implications for advanced and developing economies alike. p.p1 {margin: 0.0px 0.0px 0.0px 0.0px; font: 10.0px Arial}

This paper revisits the effects of corruption on the state 's capacity to raise revenue, building on the existing empirical literature using new and more disaggregated data. We use a comprehensive dataset for 147 countries spanning 1995-2014, compiled by the IMF. It finds that—consistent with the existing literature—corruption is negatively associated with overall tax revenue, and most of its components. This relationship is predominantly influenced by the way corruption interacts with tax compliance. The establishment of large taxpayer offices improves tax compliance by dampening the perception of corruption, thereby boosting revenue.

This paper examines the impact of e-invoicing on firm tax compliance and performance using administrative tax data and quasi-experimental variation in the rollout of VAT electronic invoicing in Peru. We find that e-invoicing increases reported firm sales, purchases and value-added by over 5 percent in the first year after adoption. The impact is concentrated among smaller firms and sectors with higher rates of non-compliance, suggesting that e-invoicing enhances compliance by lowering compliance costs and strengthening deterrence. The reform 's positive effects on tax collection are hindered by shortcomings in the VAT refund mechanism in Peru, suggesting that digital tools such as e-invoicing should be complemented by other reforms to improve revenue mobilization.

"This paper studies whether compliance with the Basel Core Principles for Effective Banking Supervision (BCP) improves bank soundness. BCP compliance assessments provide a unique source of information about the quality of bank supervision and regulation around the world. The authors find a significant and positive relationship between bank soundness (measured with Moody's financial strength ratings) and compliance with principles related to information provision. Specifically, countries that require banks to report regularly and accurately their financial data to regulators and market participants have sounder banks. This relationship is robust to controlling for broad indexes of institutional quality, macroeconomic variables, sovereign ratings, as well as reverse causality. Measuring soundness through z-scores yields similar results. The findings emphasize the importance of transparency in making supervisory processes effective and strengthening market discipline. Countries aiming to upgrade banking regulation and supervision should consider giving priority to information provision over other elements of the Core Principles. "--World Bank web site.

This paper studies whether compliance with the Basel Core Principles for effective banking supervision (BCPs) is associated with bank soundness. Using data for over 3,000 banks in 86countries, we find that neither the overall index of BCP compliance nor its individual components are robustly associated with bank risk measured by Z-scores. We also fail to find a relationship between BCP compliance and systemic risk measured by a system-wide Zscore.

Modern tax administrations seek to optimize tax collections while minimizing administration costs and taxpayer compliance costs. Experience shows that voluntary compliance is best achieved through a system of self-assessment. Many tax administrations have introduced self-assessment principles in the income tax law but the legal authority is not being consistently applied. They continue to rely heavily on “ desk ” auditing a majority of tax returns, while risk management practices remain largely underdeveloped and/or underutilized. There is also plenty of opportunity in many countries to enhance the design and delivery of client-focused taxpayer service programs, and better engage with the private sector and other stakeholders.
