has become clearly evident that mediocrity was not a path chosen by anyone in this book. It has also become vividly apparent that humanitarian contribution was a common theme in the lives of many of these professionals and as a company we made it our primary objective to recognize those contributions first and foremost. Although the foundation of our company is based on networking and mutual

collaboration we felt it was our moral obligation to assist in any way we can the professionals who demonstrated extreme self-sacrifice and compassion for others. We would also like to mention that our staff went to great personal length to get the fine details of each and every person in this book. We pride ourselves in offering much more than a registry and a basic summary of each professional. We encourage you the reader to

immerse yourself in the lives of others. Experience the joy, pain, adversity, fear and heroism of some of the most brilliant professionals on our planet. Speaking for myself and the staff of the Remington Registry of Outstanding Professionals we hope you enjoy reading our book and it is our sincere desire that you draw inspiration from it and use it as a tool when relentlessly pursuing your dreams. *Manual for*

*the Wheeled Vehicle Driver* Jeffrey Frank Jones Will help develop an Army experienced enough to be comfortable with operating anywhere, in any type of operation, under any conditions. Its principles and concepts are intended to produce agile leaders, who can rapidly and easily adapt to changing, ambiguous situations. The manual's 4 chapters address the breadth and depth of Army training concepts. FM 7-0 sets out to change the Army mindset. The Army cannot return to its pre-9-11 focus of training for offensive and defensive operations in major combat operations. Army leaders must think differently about training and leader development in an Army that must be capable of conducting simultaneous offense, defense, and stability or civil support operations in any of the 5 operational themes. Today's Army  
is challenged  
by a wide  
range of  
threats and  
operating  
environments.  
These  
challenges,  
plus new  
technologies,  
require our  
leaders to  
use creative  
measures to  
provide  
positive  
protection to  
our Soldiers  
and  
equipment. In  
April 1998,  
Field Manual  
(FM) 100-14  
introduced to  
the Army the  
first  
doctrinal  
publication

on risk  
management.  
It detailed  
the  
application  
of a step-by-  
step process  
to conserve  
combat power  
and  
resources.  
This  
milestone  
manual  
outlined a  
framework  
that leaders  
could use to  
make force  
protection a  
routine part  
of planning,  
preparing,  
and executing  
operational,  
training, and  
garrison mis-  
sions. Before  
the outset of  
the global

war on  
terrorism it  
became  
apparent that  
FM 100-14  
would require  
updating to  
meet the  
needs of the  
future. Army  
assessments  
also  
indicated  
that the  
existing  
manual needed  
to be  
expanded to  
provide clear  
standards and  
guidance on  
how the risk  
management  
process was  
to be  
applied. This  
led to this  
current  
revision.  
During

---

development of revision has this revision been the Army broadened its understanding of the risk management process to encompass all operations and activities, on and off duty. This holistic approach focuses on the composite risks from all sources rather than the traditional practice of separating accident from tactical hazards and associated risks. This

refocused to clearly reflect the Army's new composite approach, and has been retitled Composite Risk Management (CRM). CRM represents a culture change for the Army. It departs from the past cookie cutter safety and risk management mentality through teaching Soldiers "how to think" rather than

telling them "what to think." This manual expands the context of the original FM by focusing on the application of composite risk management to the military decision making process (MDMP) and the Army training management system. It further assigns the responsibilities for conducting risk management

---

training during initial entry training and professional military education. It is a tool that works in conjunction with the Army's on-going initiative to firmly attach CRM to all Army processes. It is a milestone document for the standardization and institutionalization of the techniques, tools, and procedures that lead to sound

decision making and valid risk acceptance by leaders at all levels. This revision is a full rewrite of FM 100-14. It marks a break with the past by integrating the CRM process into Army operations. CRM is not a stand-alone process, a "paper work" drill, or an add-on feature. Rather, it is used as a fully-integrated element of detailed

planning. It must be so integrated as to allow it to be executed intuitively in situations that require immediate action. CRM should be viewed as part of the military art interwoven throughout the Army's military decision making and training management cycles.

management process provides leaders and individuals a method to assist in identifying the optimum course of action (COA). Risk management must be fully integrated into planning, preparation, and execution. Commanders are responsible for the application of risk management in all military operations. Risk

management facilitates the mitigation of the risks of threats to the force. For the purposes of this document, threat is defined as a source of danger—any opposing force, condition, source, or circumstance with the potential to negatively impact mission accomplishment and/or degrade mission capability.

Each of the services uses similar but slightly different processes. This publication provides a single process to enable warfighters from different services to manage risk from a common perspective. Risk management is useful in developing, deploying, and employing the joint force. Development concerns force design,

---

manpower allocation, training development, and combat material developments. Deploying and employing the joint force generates concerns in force protection and balancing risk against resource constraints. Military operations are inherently complex, dynamic, dangerous and, by nature, involve the acceptance of risk. Because risk is often related to gain, leaders weigh risk against the benefits to be gained from an operation. The commander's judgment balances the requirement for mission success with the inherent risks of military operations. Leaders have always practiced risk management in military decision making; however, the approach to risk is often related to management and degree of success vary widely depending on the leader's level of training and experience. Since the Korean conflict, United States forces have suffered more losses from noncombat causes than from enemy action. Key factors contributing to those losses include—Rapidly changing operational environment; Fast-paced,

---

high operations tempo and high personnel tempo; Equipment failure, support failure, and effects of the physical environment; Human factors. The fundamental goal of risk management is to enhance operational capabilities and mission accomplishment, with minimal acceptable loss. *The Engineer* Lulu.com Composite

**Man-Machine-Environment System Engineering: Proceedings of the 21st International Conference on MMESE** Delene Kvasnicka [www.survivalebooks.com](http://www.survivalebooks.com)

Despite the prevalence of irregular wars, the U.S. Army must also be

---

prepared for the possibility of a high-intensity conventional war. The training required for this war must simulate the expected conditions, those of high-intensity conflict, as closely as possible. As U.S. strategic leaders look to the future and prepare the U.S. Army for the next conflict, they prepare for a war with a level of violence that resembles that of the Korean War. While conditions that simulate combat are dangerous and present inherent risks, the mitigation of that risk prevents the adequate simulation of a high-intensity combat situation. Therefore, this thesis studied how risk mitigation practices in U.S. Army tactical infantry training affect Soldiers' preparedness for high-intensity combat operations. By examining U.S. Army infantry training at the tactical level, U.S. Army safety and risk mitigation doctrine, cognitive and perceptual biases, and historical case studies, this thesis suggests that U.S. Army risk management practices neither hinder nor
