It's not a truck or a car—it's a Jeep! Developed in the early 1940s as a light reconnaissance vehicle for the US Army, the Jeep successfully transitioned from military usage to public use with the arrival of the CJ-2A in 1945. Many more CJ models followed, which cemented the Jeep as one of the most successful and longest-tenured models when the CJ-10A was discontinued in 1986. With more than 1.5 million Jeeps sold, a restoration book for these vehicles has been desperately needed. Author Mark Altschuler of [restoremyjeep.com](http://restoremyjeep.com) showcases his decades of experience in this must-have restoration book that features component restoration of all aspects of the timeless Jeep. Step-by-step procedures document the disassembly, restoration, and reassembly of your favorite models, while color illustrations depict exactly what you're wanting to see as you address your project. How to Restore Your Jeep 1941–1986 is not only a handy tool that addresses the total restoration of your prized machine but it will likely also be one of the most affordable tools that you will purchase for your project.

Difficult situations occur every day, all over the world. They can occur in our homes, on our jobs, and even in our churches. As Christians, we must face these challenges and understand their roots in

the spiritual world. We must also answer the call to witness Christ to everyone, especially those who cause us difficulty and distress. In *More than Conquerors II: They That Are with Us: A Believer's Guide to Overcoming Opposition and Ethical Dilemmas*, minister and author Thomas Randolph Wood Jr. shows through real-world examples how true victory over situations, circumstances, and difficult persons is available through Jesus Christ. The helpful, encouraging lessons of *They That Are with Us* offer answers to the hard and sometimes overwhelming challenges we encounter in our lives today. Perhaps we struggle with money, with relationships, with the future, or with faith; by sharing our stories and sharing the word of God, we can learn to honestly support each other in our walks both inside and outside the physical structures of our church buildings. Through this testimony and witness, we experience the true will of God for our congregations, for ourselves, and for our world.

Learn how to rebuild a small-block Chevy in your own garage with this full-color guide, written in layperson's terms. Chapters show you how to assess and choose an engine for rebuilding; how to tear it down and inspect it; and how to decide what needs to be done, whether you plan a basic restoration or a performance build. If you need specialized machine work, learn how to find a good machine shop, and what questions to ask the machinist. It also shows what the machine shop does, as it applies to what you must know to make the right decisions when dealing with a machine shop. It even includes information on how to get the best street performance on a reasonable budget, including what engine to start with, what parts to buy, and what combinations work best. Great tips show you where to spend your money to get the best deal.

Transportation in cities, with its related environmental and social concerns continues to be a topic of the utmost priority for urban authorities and central governments around the world. Frequently, the concern is not orderly but driven by the safety crises, which take place regularly, and even the best-planned urban transport systems require considerable studies to safeguard their safety, maintenance and operational use. On a broader front, the continuing need for better urban transport systems in general and the need for a healthier environment has led to an increased level of research around the world. This is reflected in the proceedings of the Thirteenth International Conference on Urban Transport and the Environment in the 21st Century, which stresses the continuous steady growth and research into the urban transport systems control aspects, information and imulation systems. All these topics continue to be of importance for analyzing the complex inter-relation of the urban transport environment and for establishing action strategies for transport and traffic problems. Of interest to

engineers, scientists and managers working in industry, universities, research organizations and government involved in the planning and management of urban transportation systems and transport policy, this book contains papers within the following subject areas: Environmental and ecological considerations; Information systems and GPS applications; Intelligent transport systems; Intermodel passenger transport systems; Land use and transport integration; Modality in freight; Public transport systems; Road pricing; Traffic management; Transport automation; Transport logistics and operations research; Transport modelling and simulation; Transport security and safety; Transport sustainability; Transport technology; Urban transport planning.
