Teacher preparation programs in the United States and around the world have finally begun

---

to address this deficiency in their programs. The realization that technology is a powerful driving force in education coupled with a renewed emphasis on teacher preparation by governments have resulted in some dramatic changes in teacher preparation programs. I believe that we have just begun to see changes in teacher preparation and that the pace of change will continue to accelerate. This volume covers some of the more exciting developments in the field, including the emergence of wireless computing in the classroom and the preparation of teachers in an online environment. In short, I am optimistic. For those of you who are also in the field, I think you will agree. For those who are just entering the field, this book is a great place to start as you change education. Finally, while this book is the last book of the three part series that we at CAIT conceptualized with Charalambos Vrasidas and Gene Glass, it is also the beginning of a new relationship. We are excited to join with a new partner, CARDET, to present this book. Over many years in the education and R&D field, I have come to realize the value of partnerships and relationships. I want to thank both Charalambos and Gene for making this series a reality and such a success. We are looking forward to working with them and CARDET in the near future.

Preparing for IC3" Designed to prepare you with the computer knowledge of Microsoft applications, and Internet information you need to

---

succeed in a personal or business environment wherein developing a skilled workforce via varying computer skills are required."--Preface. IC3: Internet and Computing Core Certification Computing Fundamentals Study Guide

Community colleges are essential in preparing the 21st century workforce. Research has indicated that there is a shortage of individuals prepared for skilled workforce opportunities, such as plumbers, electricians, and many others. In fact, while college is essential in workforce development, it is not the only route that can lead to a successful livelihood. Developing a skill that transfers into an essential trade is a route less taken. Community colleges are ideally situated to respond to the shortage of a prepared workforce by providing an array of programs that reach a wide range of individuals with talents that may not include a college degree. Community Colleges and Workforce Preparation in the 21st Century: Emerging Research and Opportunities is a comprehensive reference source that covers the essential role of community colleges

educational opportunities that include degree completion, workforce development, and skill enhancement. Readers will benefit from the book 's ability to advocate for the need for individuals with skillful trade options, provide different areas to consider as trade options, discuss the role of community colleges in preparing a workforce, examine the challenges that can arise for individuals with a trade, and present a global outlook on the workforce of the 21st century. Covering topics that include career pathways and STEM programs, the book is especially valuable for academic institutions that are looking to provide options for talent expansion. Leadership and education scholars, leadership practitioners within community college and university settings, leaders within workforce development sectors, researchers, and students will also find this reference useful for developing a skilled and competent workforce.
