A systematic assessment of the impact of public access to computers and the Internet, with findings from developing countries in South America, Asia, and Africa. Shared public access to computers and the Internet in developing countries is often hailed as an effective, low-cost way to share the benefits of digital technology. Yet research on the economic and social

effects of public access to computers is lacking. This volume offers the first systematic assessment of the impact of shared public access in the developing world, with findings from ten countries in South America, Asia, and Africa. It provides evidence that the benefits of diversified participation in digital society go beyond providing access to technology. Public access venues—most often Internet cafés in cities and state-run telecenters in rural areas—are places for learning, sharing, working, empowerment and finding opportunities. The

book documents the impact of public access on individuals, on society and networks, and on women. Chapters report findings and examine policy implications of research on such topics as users' perceptions of the benefits of Internet café use in Jordan; ICT job training in Rwanda; understanding user motivations and risk factors for overuse and Internet addiction in China; the effect of technology use on social inclusion among low-income urban youth in Argentina; productive uses of technologies by grassroots organizations in Peru; use of

technology by migrant ethnic minority
Burmese women in Thailand to maintain ties with their culture and their family and friends; and women's limited access to the most ubiquitous type of venue, cybercafés, in practically all countries studied—and quite severely in some places, e.g. Uttar Pradesh, India.

An increasing amount of
research is being developed
in the area where
technology and humans
meet. The success or failure
of technologies and the
question whether
technology helps humans to
fulfill their goals or whether
it hinders them is in most
cases not a technical one.
User Perception and
Influencing Factors of
Technology in Everyday Life
addresses issues of human
and technology interaction.
The research in this work is
interdisciplinary, ranging
from more technical
subjects such as computer
science, engineering, and
information systems, to non-
technical descriptions of
technology and human
interaction from the point of
view of sociology or
philosophy. This book is
perfect for academics,
researchers, and
professionals alike as it

presents a set of theories that allow us to understand the interaction of technology and humans and to put it to practical use.
