(a) Why is this a problem in today's networks? Since it is not practical to change the TCP header format, the only way of increasing the maximum flow control window size is to use TCP options. (b) Present a solution to increase the maximum TCP windows size (based on options) that works but may be slow in practice.

Network Address Translation (NAT) is the process where a network device, usually a firewall, assigns a public address to a computer (or group of computers) inside a private network. The main use of NAT is to limit the number of public IP addresses an organization or company must use, for both economy and security purposes.
