Each year, Windows XP is pre-installed on 30 million PCs sold in the U.S.--and 90 million worldwide--making it the world's most popular operating system, and proving to frustrated users everywhere that preponderance does not equate to ease of use. There are literally thousands of programs, tools, commands, screens, scripts, buttons, tabs, applets, menus, and settings contained within Windows XP. And it has only been in the last couple of years that Microsoft's documentation has actually been more of a help than a hindrance. But it still isn't enough. Windows XP users and administrators need a quick and easy way to find answers. Plenty of books go into detail about the theory behind a particular technology or application, but few go straight to the essentials for getting the job done. Windows XP Cookbook does just that, tackling the most common tasks needed to install, manage, and support Windows XP. Featuring a new twist to O'Reilly's proven Cookbook formula, this problem-solving guide offers multiple solutions for each of its 300-plus recipes. Solve dilemmas with the graphical user interface, the command line, through the Registry, or by using scripts. Each step-by-step recipe includes a discussion that explains how and why it works. The book is also among the first to cover Microsoft's XP Service Pack 2. With these practical, on-the-job solutions, Windows XP Cookbook will save you hours of time searching for answers. Windows XP Cookbook will be useful to anyone that has to use, deploy, administer, or automate Windows XP. But this isn't a typical end-user book; it covers the spectrum of topics involved with running Windows XP in both small and large environments. As a result, IT professionals and system administrators will find it a great day-to-day reference. And power users will find Windows XP Cookbook a great source for information on tweaking XP and getting the most out of their systems. The bottom line is that Windows XP Cookbook will make just about anyone who uses XP more productive.

A strong and fluent competency in mathematics is a necessary condition for scientific, technological and economic progress. However, it is widely recognized that problem solving, reasoning, and thinking processes are critical areas in which students' performance lags far behind what should be expected and desired. Mathematics is indeed an important subject, but is also important to be able to use it in extra-mathematical contexts. Thinking strictly in terms of mathematics or thinking in terms of its relations with the real world involve quite different processes and issues. This book includes the revised papers presented at the NATO ARW "Information Technology and Mathematical Problem Solving Research", held in April 1991, in Viana do Castelo, Portugal, which focused on the implications of computerized learning environments and cognitive psychology research for these mathematical activities. In recent years, several committees, professional associations, and distinguished individuals throughout the world have put forward proposals to renew mathematics curricula, all emphasizing the importance of problem solving. In order to be successful, these reforming intentions require a theory-driven research base. But mathematics problem solving may be considered a "chaotic field" in which progress has been quite slow.

A systematic and integrated account of signal and data processing with emphasis on the distinctive marks of the ocean environment is provided in this informative text. Underwater problems such as space-time processing relations vs. disjointed ones, processing of passive observations vs. active ones, time delay estimation vs. frequency estimation, channel effects vs. transparent ones, integrated study of signal, data, and channel processing vs. separate ones, are highlighted. The book provides the beginner with a concise presentation of the essential concepts, defines the basic computational steps, and gives the mature reader an advanced view of underwater systems and the relationships among their building blocks. It presents the needed topics on applied estimation theory within the underwater systems context. Included are topics in linear and nonlinear filtering, spectral analysis, generalized correlation, cepstrum and complex demodulation, Cramer-Rao Bounds, maximum likelihood, weighted least-squares, Kalman filtering, expert systems, wave propagation and their use, as well as their performance in applications to canonical ocean problems. The applications center on the definition, analysis, and solution implementations to representative underwater signal analysis problems dealing with signals estimation, their location and motion. The potential limitations and pitfalls of the implementations are delineated in homogeneous, noisy, interfering, inhomogeneous, multipath, distortions, and/or dispersive channels. *The Game Audio Strategy Guide* "O'Reilly Media, Inc."

This book discusses the applications of evolutionary computation to music and the tools needed to create and study such systems. These tools can be combined to create surrogate artificial worlds populated by interacting simulated organisms in which complex musical experiments can be performed. The book demonstrates that evolutionary systems can be used to create and to study musical compositions and cultures in ways that have never before been

achieved.

Strategic Defense Initiative Addison Wesley Publishing Company Ethical issues are emerging as the most important managerial challenge in all spheres of organizational life, from the wider issues of strategy-making, finance, technology, marketing, information systems to the subtle concerns of gender, demography or cultural diversity. The competitive market-economy model has widened the scope for managers in all countries to violate the fundamental values and integrity needed to maintain and enrich a civil society. These violations stretch from personal lapses of bribery and corruption to the wider areas of moral questions related to an ethically grounded global business system. This book grew out of a three-day international workshop addressing these issues, held at the Management Centre for Human Values (MCHV), Indian Institute of Management, Calcutta, during February 1998. The workshop explored topics of applied management by providing multiple perspectives. Eighteen of the papers have been chosen for this volume, covering business functions, strategies and alliances. One of the key objectives of the workshop was to integrate ideas of applied ethics developing from Asia, Australia and Europe. Any book on applied ethics must be founded on a multicultural base and be practically oriented. This project has been greatly privileged in drawing together the work of 18 very senior and widely experienced academics and practitioners, spanning four continents. The two editors, from different continents, communicated regularly with each other and the contributors. The book is a result of the support and encouragement of many individuals.
