You, your physics book, and your pencil will all feel normal weight at the same speed! Solving this equation for rotational velocity gives: This last set of equations tell us that the rotational velocity of a "1 g" space station would be inversely proportional to the square root of the station's radius.

Today's lesson is meant to help students review rotational motion and see how torque, angular momentum, center of mass, and rotational kinetic energy are tested in the AP Physics 1 Exam. I've chosen to do a full day of AP preparation for this unit because I want students to get prepared for the endurance and focus College Board requires.
