Configuration, Maintenance  
and Procedures ...

The Configuration  
Management process  
ensures that the selected  
components (the  
Configuration Items) are  
identified, baselined, and  
maintained and that changes  
to them are duly controlled.  
This control aims at  
verifying in particular that:

- each item is defined by  
applying the procedure  
described in the present  
document

documentation is then flowed  
back up from the sub-contractors  
to the prime contractor and  
eventually to the OPR. This  
process must be contractually  
obligated in all contract drivers  
and delineated in the government  
configuration management plan  
(CMP) and the associated prime  
contractor CMP. 3. CM Related
