Software configuration management (SCM) is one of the scientific tools that is aimed to bring control to the software development process. This new resource is a complete guide to implementing, operating, and maintaining a successful SCM system for software development. Project managers, system designers, and software developers are presented with not only the basics of SCM, but also

the different phases in the software development lifecycle and how SCM plays a role in each phase. The factors that should be considered and the pitfalls that should be avoided while designing the SCM system and SCM plan are also discussed. In addition, this third edition is updated to include cloud computing and on-demand systems. This book does not rely on one specific tool or standard for explaining the SCM concepts and techniques; In fact, it gives readers enough information about SCM, the mechanics of SCM, and SCM implementation, so that they can successfully implement a SCM system.

On January 16, 2007, the U.S. Federal Aviation

Administration (FAA) issued revised regulatory material relating to the operation of all aircraft on flights with the potential for extended time diversions. As a result, the term ETOPS has been redefined as “Extended Operations” and now includes the operation

of all transport aircraft, regardless of the number of engines (except All-Cargo operations of airplanes with more than 2-engines), further than specific threshold times from available enroute diversion airports. The new FAA rules, while still limiting two-engine airplanes to routes that remain within 60 minutes from an Adequate Airport, unless the operator is approved for ETOPS, will now allow two-engine airplanes to be flown on ETOPS routes with diversion times greater than 240 minutes flying time in certain geographic regions. Passenger

airplanes with more than two engines will also be required to meet ETOPS requirements under the new rules, whenever they are operated more than 180 minutes from an Adequate Airport. ETOPS Operational Approvals may be granted to operators if the airframe/engine combination being used has been approved for such flights and the operator has established acceptable operations and maintenance programs. FAA Advisory Circulars, AC 120-42B and AC 135-42, provide guidelines for the additional operations, maintenance, reliability and

training programs that are required of an FAA ETOPS operator. NOTE: Based on Boeing operations. Only for information purpose. For real flight refer to Boeing manuals. Medicare Health Maintenance Organization/competitive Medical Plan Manual Simon and Schuster
