On the occasion of his 90th birthday Louis Kriesberg provides an informative account of his career, tracing the trajectory of his discoveries, contributions, and stumbles as he sought to help the advance toward a more sustainable and just peace in the world. His work contributes to ideas and practices in several areas of conflict studies, notably intractable conflicts and their transformation, reconciliation, conflict analysis, and waging conflicts constructively. Although neither an autobiography nor a memoir, he embeds the course of his work in the context of historical events and in the evolving fields of peace studies and conflict resolution. In addition, he discusses the interaction of those fields with major conflicts. The book includes seven previously-published exemplary pieces on these and other topics, a comprehensive list of his publications, and several photos. A discussion of Kriesberg's work and its significance is provided by George A. Lopez, Professor of Peace Studies, University of Notre Dame. **The Case Manager's Handbook** Cambridge University Press

The development of this inaugural Handbook of Oncology Social Work: Psychosocial Care for People With Cancer provides a repository of the scope of oncology social workers' clinical practice, education, research, policy and program leadership in the psychosocial care of people with cancer and their families. It

focuses on the unique synergy of social work perspectives, values, knowledge, and skills with the psychosocial needs of cancer patients, their families, and the health care systems in which they are treated. It addresses both the science and art of psychosocial care and identifies the increasing specialization of oncology social work related to its unique knowledge base, skills, role, and the progressive complexity of psychosocial challenges for patients with cancer. This Handbook equips the reader with all that we know today in oncology social work about patient and family centered care, distress screening, genetics, survivorship, care coordination, sociocultural and economic diversity, legal and ethical matters, clinical work with adults living with cancer, cancer across the lifespan, their caregivers and families, pediatrics, loss and grief, professional career development, leadership, and innovation. Our hope is that in reading this Handbook you will identify new areas where each of you can leave your mark as innovators and change agents in our evolving field of practice.

Federal Register CRC Press  
Markets, not politics, are driving health care reform in America today. Inventive entrepreneurs have transformed medicine over the past ten years, and no end to this period of rapid change is in sight. Consumer anxieties over managed care are mounting, and medical costs are again soaring. Meanwhile, the federal government remains mostly on the health policy sidelines, as it has since the collapse of the Clinton administration's campaign for health care reform. This book addresses the changes that the market has wrought- and the challenges this transformation poses for courts and regulators. The law that governs the medical marketplace is an incomplete, overlapping patchwork, conceived mainly without medical care specifically in mind. The ensuing confusion and incoherence are a central theme of this book. Fragmentation of health care lawmaking has foreclosed coordinated, system-wide policy responses, and lack of national consensus on many of the central questions in health care policy has translated into legal contradiction and bitter controversy. Written by leading commentators on American health

law and policy, this book examines the widely-perceived failings of managed care and the law's relationship to them. Some of the contributors treat law as a cause of trouble; others emphasize the law's potential and limits as a corrective tool when the market disappoints. The first two chapters present contrasting overviews of how the doctrines and decision-makers that constitute health law work together, for better or worse, to constrain the medical marketplace. The next six chapters address particular market developments and regulatory dilemmas. These include the power of state versus federal government in the health sphere, conflict between insurers and patients and providers over medical need, financial rewards to physicians for frugal practice, the role of antitrust law in the organization of health care provision and financing, the future of public hospitals, and the place of investor-owned versus non-profit institutions. Acknowledging the health sphere's complexities, the authors seek remedies that fit this country's legal, political, and cultural constraints and can contribute to reasoned regulatory governance. Within limits they believe a measure of rationality is possible.

Glaser and Hamel offer readers an opportunity to step back from the ethical issues connected with modern health care and reflect on what we are doing, how we are doing it, and what impact our actions (and omissions) are having on the common good. While offering a new ethical paradigm that takes into account the three realms of ethical complexity (societal issues, institutional issues, and individual issues), this book offers articles for reflection and self-examination on various aspects of managed care, taking into account specific issues such as rationing, financial incentives, and full disclosure.

The Textbook of Palliative Care Communication is the authoritative text on communication in palliative care, providing a compilation of international and interdisciplinary perspectives. The volume was uniquely developed by an interdisciplinary editorial team to address an array of providers including physicians, nurses, social workers, and chaplains, and unites clinicians with academic researchers interested in the study of communication. By featuring practical conversation and curriculum tools stemming from research, this text integrates scholarship and inquiry into translatable content that others can use to improve their practice, teach skills to others, and engage in patient-centered communication. The volume begins by defining communication, explicating debatable issues in research, and highlighting specific approaches to studying communication in a palliative care context. Chapters focus on health literacy and cultural communication, patient and family communication, barriers and approaches to discussing palliative care with specific patient populations, discussing pain, life support, advance care planning, and quality of life topics such as sexuality, spirituality, hope, and grief. Team communication in various care settings is outlined and current research and education for healthcare professionals are summarized. Unique to this volume are chapters on conducting communication research, both qualitatively and quantitatively, to promote further research in palliative care.

**Supportive Care for the Renal Patient** DIANE Publishing

Despite the attention to the problem of protecting the health care interests of

Americans, there is little consensus on what should be done politically or otherwise to address this problem. In *Protecting American Health Care Consumers* Eleanor DeArman Kinney, a nationally regarded expert on health policy and law, tackles the serious and ongoing debate among state and federal policymakers, health care providers, third-party payers, and consumers about how to provide procedural justice to patients in the present health care climate. To promote and ensure consumer protection in an increasingly adversarial and complicated health-care culture, Kinney first analyzes the procedures by which consumer concerns are presently discerned and resolved and then explains why these systems are unsatisfactory. She also discusses problematic procedures for making coverage policy and quality standards and proposes reforms in a variety of processes that would enable all consumers, including the uninsured, to influence key policies and standards and also to raise concerns and obtain appropriate remedies. As the first comprehensive treatment of administrative procedures in American health plans and other such institutions, *Protecting American Health Care Consumers* will be welcomed by state and federal policymakers, managed care executives, and lawyers charged with designing and implementing protections for consumers in public and private health plans.

K. Danner Clouser is one of the most important figures in establishing and shaping the fields of medical ethics, bioethics, and the philosophy of education in the second half of the twentieth century. Clouser challenged many established approaches to moral theory and offered innovative strategies for integrating the humanities into professional education, especially that of physicians and nurses. The contributions published in *Building Bioethics: Conversations with Clouser* and

Friends on Medical Ethics are unique both in their devotion to a critical review of his contributions, and in bringing together internationally known figures in bioethics, medical ethics, and philosophy of medicine to comment upon Clouser's work. These leaders of the field include Tom Beauchamp, Daniel Callahan, James Childress, Nancy Dubler, H. Tristram Engelhardt, Al Jonsen, Loretta Kopelman, Larry McCullough, John Moskop, and Robert Veatch. This book merits special attention from those interested in bioethics, philosophy of medicine, medical ethics, philosophy, medical education, religious studies, and nursing education.

*Supportive Care for the Renal Patient Second Edition* provides a comprehensive, evidence-based overview of supportive care for the nephrology patient. An international group of contributors emphasise the continuum of palliative care from the time of diagnosis through to end-of-life care and the issues surrounding withdrawal of dialysis. The book addresses the psychological impact of the disease, the importance of involving the patient in making decisions about their care, ethical considerations, the role of the family and the multidisciplinary team. This new edition includes two new chapters on conservative management of advanced kidney disease (AKD) and dialysis in the very elderly. The chapters covering non pain symptoms, advance care planning, quality of life, psychological and psychiatric consideration and end-of-life care have also been completely revised to include new evidence and current thinking. This book will be of particular interest to palliative care practitioners; nephrologists, who increasingly need to know more about palliative care; nurse practitioners, dialysis nurses, social workers, dietitians, and psychiatric consultants. ABOUT THE SUPPORTIVE CARE SERIES Supportive care is the multidisciplinary holistic care of patients with chronic

and life-limiting illnesses and their families - from the time around diagnosis, through treatments aimed at cure or prolonging life, and into the phase currently acknowledged as palliative care. It involves recognising and caring for the side-effects of active therapies as well as patients' symptoms, co-morbidities, psychological, social and spiritual concerns. It also values the role of family carers and helps them in supporting the patient, as well as attending to their own special needs. Unlike traditional palliative care, which grew from the terminal care of cancer patients, supportive care is not restricted to dying patients nor to cancer. This series covers the support of patients with a variety of long-term conditions, who are currently largely managed by specialist medical teams in hospital and by primary care teams in community settings. Each volume therefore provides a practical guide to the supportive care of patients at all stages of illness. Series Editor: Sam H. Ahmedzai
