The obesity epidemic is one of the most serious public health threats confronting the nation and the world. The majority of overweight individuals want to lose weight, but the overall success of self-administered diets and commercial weight loss programs is very poor. Scientific findings suggest that the problem boils down to adherence. The dietary and physical activity recommendations that weight loss programs promote are effective; however, people have difficulty initiating and maintaining changes. *Effective Weight Loss* presents 25 detailed sessions of an empirically supported, cognitive-behavioral treatment package called Acceptance-Based Behavioral Treatment (ABT). The foundation of this approach is comprised of the nutritional, physical activity, and behavioral components of the most successful, gold-standard behavioral weight loss programs. These components are synthesized with acceptance, willingness, behavioral commitment, motivation, and relapse prevention strategies drawn from a range of therapies. ABT is based on the idea that specialized self-control skills are necessary for weight control, given our innate desire to consume delicious foods and to conserve energy by avoiding physical activity. These self-control skills revolve around a willingness to choose behaviors that may be perceived as uncomfortable, for the sake of a more valuable objective. The Clinician Guide is geared towards helping administer treatment, and the companion Workbook provides summaries of session content, exercises, worksheets, handouts, and assignments for patients and clients receiving the treatment. The books will appeal to psychologists, primary care physicians, nutritionists, dietitians, and other clinicians who counsel the overweight. **Conflict Resolution Smarts** Ballantine Books

"These two volumes clearly demonstrate the efforts by a wide range of African scholars to explain the roots, routes, regimes and resolution of African conflicts and how to re-build post-conflict societies. They offer sober and serious analyses, eschewing the sensationalism of the western media and the sophistry of some of the scholars in the global North for whom African conflicts are at worst a distraction and at best a confirmation of their pet racist and petty universalist theories." --From the introduction by Paul Tiyambe Zeleza This book offers analyses of a range of African conflicts and demonstrates that peace is too important to be left to outsiders.

What do we wish most for our children? Next to being healthy, we want them to be happy, of course! Fortunately, a wide array of scientific studies show that happiness is a learned behavior, a muscle we can help our children build and maintain. Drawing on what psychology, sociology, and neuroscience have proven about confidence, gratefulness, and optimism, and using her own chaotic and often hilarious real-world adventures as a mom to demonstrate do's and don'ts in action, Christine Carter, Ph.D, executive director of UC Berkeley's Greater Good Science Center, boils the process down to 10 simple happiness-inducing steps. With great wit, wisdom, and compassion, Carter covers the day-to-day pressure points of parenting—how best to discipline, get kids to school and activities on time, and get dinner on the table—as well as the more elusive issues of helping children build healthy friendships and develop emotional intelligence. In these 10 key steps, she helps you interact confidently and consistently with your kids to foster the skills, habits, and mindsets that will set the stage for positive emotions now and into their adolescence and beyond.
