This book provides an overview of the current Internet of Things (IoT) landscape, ranging from the research, innovation and development priorities to enabling technologies in a global context. A successful deployment of IoT technologies requires integration on all layers,

be it cognitive and semantic aspects, middleware components, services, edge devices/machines and infrastructures. It is intended to be a standalone book in a series that covers the Internet of Things activities of the IERC - Internet of Things European Research Cluster from research to technological innovation, validation and deployment. The book builds on the ideas put forward by the European Research Cluster and the IoT European Platform Initiative (IoT-EPI) and presents global views and state of the art results on the challenges facing the research, innovation, development and deployment of IoT in the next years. The IoT is bridging the physical world with virtual world and requires sound information processing capabilities for the "digital shadows" of these real things. The research and innovation in nanoelectronics, semiconductor,

sensors/actuators, communication, analytics technologies, cyber-physical systems, software, swarm intelligent and deep learning systems are essential for the successful deployment of IoT applications. The emergence of IoT platforms with multiple functionalities enables rapid development and lower costs by offering standardised components that can be shared across multiple solutions in many industry verticals. The IoT applications will gradually move from vertical, single purpose solutions to multi-purpose and collaborative applications interacting across industry verticals, organisations and people, being one of the essential paradigms of the digital economy. Many of those applications still have to be identified and involvement of end-users including the creative sector in this innovation is crucial. The IoT applications and

deployments as integrated building blocks of the new digital economy are part of the accompanying IoT policy framework to address issues of horizontal nature and common interest (i.e. privacy, end-to-end security, user acceptance, societal, ethical aspects and legal issues) for providing trusted IoT solutions in a coordinated and consolidated manner across the IoT activities and pilots. In this, context IoT ecosystems offer solutions beyond a platform and solve important technical challenges in the different verticals and across verticals. These IoT technology ecosystems are instrumental for the deployment of large pilots and can easily be connected to or build upon the core IoT solutions for different applications in order to expand the system of use and allow new and even unanticipated IoT end uses. Technical topics discussed in the book include:

Introduction
Digitising industry and IoT as key enabler in the new era of Digital Economy

In the post-Soviet period, discussions of “postmodernism” in Russian literature have proliferated. Based on close literary analysis of representative works of fiction by three post-Soviet Russian writers – Vladimir Sorokin, Vladimir Tuchkov and Aleksandr Khurgin – this book investigates the

usefulness and accuracy of the notion of “postmodernism” in the post-Soviet context. Classic Russian literature, renowned for its pursuit of aesthetic, moral and social values, and the modernism that succeeded it have often been seen as antipodes to postmodernist principles. The author wishes to dispute this polarity and proposes “post-Soviet neo-modernism” as an alternative concept. “Neo-modernism” embodies the notion that post-Soviet writers have redeemed the tendency of earlier literature to seek the meaning of human existence in a transcendent realm, as well as in the treasures of Russia’s cultural past.

Michel Desvigne is the most renowned French

landscape architect in the world. Based in Paris, he has held guest professorships at such distinguished institutions as the Architectural Association in London and Harvard University. Desvigne's projects have a strong strategic and conceptual component. Urban infrastructure projects play a major role, and emphasize the urban planning and design expertise evident in his landscape architecture. The book documents ten of Devigne's major projects from France, the US, Spain and Qatar, in which he is responsible not only for the landscape architecture, but for coordination of the entire project. How can such highly complex projects be realized? What does the intellectual thought process look like? What specific problems arise in their realization?
