In the post-Soviet period, discussions of “ postmodernism ” in Russian literature have proliferated. Based on close literary analysis of representative works of fiction by three post-Soviet Russian writers – Vladimir Sorokin, Vladimir Turchkov and Aleksandr Khurgin – this book investigates the usefulness and accuracy of the notion of “ postmodernism ” in the post-Soviet context. Classic Russian literature, renowned for its pursuit of aesthetic, moral and social values, and the modernism that succeeded it have often been seen as antipodes to postmodernist principles. The author wishes to dispute this polarity and proposes “ post-Soviet neo-modernism ” as an alternative concept. “ Neo-modernism ” embodies the notion that post-Soviet writers have redeemed the tendency of earlier literature to seek the meaning of human existence in a transcendent realm, as well as in the treasures of Russia ’ s cultural past.

Michel Desvigne is the most renowned French landscape architect in the world. Based in Paris, he has held guest professorships at such distinguished institutions as the Architectural Association in London and Harvard University. Desvigne’s projects have a strong strategic and conceptual component. Urban infrastructure projects play a major role, and emphasize the urban planning and design expertise evident in his landscape architecture. The book documents ten of Devigne’s major projects from France, the US, Spain and Qatar, in which he is responsible not only for the landscape architecture, but for

coordination of the entire project. How can such highly complex projects be realized? What does the intellectual thought process look like? What specific problems arise in their realization?

The U.S. Border Patrol operates checkpoints on U.S. roads, mainly in the southwest border states where most illegal entries occur. As part of a three-tiered strategy to maximize detection and apprehension of illegal aliens, Border Patrol agents at checkpoints screen vehicles for illegal aliens and contraband. This report assesses: (1) checkpoint performance and factors affecting performance; (2) checkpoint performance measures; (3) community impacts considered in checkpoint placement and design; and (4) the impact of checkpoint operations on nearby communities. Research included a review of Border Patrol data and guidance, and visits to checkpoints and communities in five Border Patrol sectors across four southwest border states. Illus.

Colorectal cancer is the third most commonly diagnosed condition in oncology, affecting around 1.23 million individuals per year, according to recent statistics. Of these patients, about 50% will develop liver metastases and approximately 20% will present a stage IV disease at diagnosis. These statistics make colorectal liver metastases (CLM) an issue of major importance in current oncology. The area of CLM is subject to great and continuous advances, as its pathophysiologic mechanisms are better understood and more therapeutic and surgical options are developed. Consequently, all professionals involved with the diagnosis, treatment and follow up of CLM should be kept up to date with the latest advances on the field, to provide high standard medical care to their patients. This book is designed to present the state-of-the-art in CLM management and, in doing so, to review the current evidence on CLM, discussing all important topics in the field. Coverage is broad and comprehensive, encompassing introductory topics (history, definitions, epidemiology, etc.), basic science subjects (molecular biology, genetics, dissemination process, etc.) and practical clinical topics (tumor behavior, diagnosis, drug therapy, radiation therapy, surgery, ablation, multidisciplinary teams, etc.). Although comprehensive on the coverage and selection of topics, each chapter is concise and objective, dissecting topics in a practical and direct format. Evidences and recommendations are included. Chapters display a brief introduction of the common knowledge, go straight to the detailed revision of the most recent years of the literature, and end with practical closing observations. This book is a tool for professionals (general and cancer surgeons, HPB surgeons, clinical oncologists, gastroenterologists and medical residents) and interns who search for a qualified and reader friendly revision on topics concerning Colorectal Cancer Liver Metastases.

Digitising the Industry - Internet of Things Connecting the Physical, Digital and Virtual Worlds Recreational Guides

This handbook offers a comprehensive review of the state-of-the-art research achievements in the field of data centers. Contributions from international, leading researchers and scholars offer topics in cloud computing, virtualization in data centers, energy efficient data centers, and next generation data center architecture. It also comprises current research trends in emerging areas, such as data security, data protection management, and network resource management in data centers. Specific attention is devoted to industry needs associated with the challenges faced by data centers, such as various power, cooling, floor space, and associated environmental health and safety issues, while still working to support growth without disrupting quality of service. The contributions cut across various IT data technology domains as a single source to discuss the interdependencies that need to be supported to enable a virtualized, next-generation, energy efficient, economical, and environmentally friendly data center. This book appeals to a broad spectrum of readers, including server, storage, networking, database, and applications analysts, administrators, and architects. It is intended for those seeking to gain a stronger grasp on data center networks: the fundamental protocol used by the applications and the network, the typical network technologies, and their design aspects. The Handbook of Data Centers is a leading reference on design and implementation for planning, implementing, and operating data center networks.
