Harvard Law student Tyler Vigen illustrates the golden rule that "correlation does not equal causation" through hilarious graphs inspired by his viral website. Is there a correlation between Nic Cage films and swimming pool accidents? What about beef consumption and people getting struck by lightning? Absolutely not. But that hasn't stopped millions of people from going to tylervigen.com and asking, "Wait, what?" Vigen has designed software

that scours enormous data sets to find unlikely statistical correlations. He began pulling the funniest ones for his website and has since gained millions of views, hundreds of thousands of likes, and tons of media coverage. Subversive and clever, *Spurious Correlations* is geek humor at its finest, nailing our obsession with data and conspiracy theory. publisher. Philosophical Writing University of Windsor Abbott helps social science students discover what questions to ask. This exciting book is not about habits and the mechanics of doing social science research, but about habits of thinking that enable students to use those mechanics in new ways, by coming up with new ideas and combining them more effectively with old ones. Abbott organizes his book around general methodological

moves, and uses examples from throughout the social sciences to show how these moves can open new lines of thinking. In each chapter, he covers several moves and their reverses (if these exist), discussing particular examples of the move as well as its logical and theoretical structure. Often he goes on to propose applications of the move in a wide variety of empirical settings. The basic aim of *Methods of Discovery* is to offer readers a new

way of thinking about directions for their research and new ways to imagine information relevant to their research problems. *Methods of Discovery* is part of the *Contemporary Societies* series. a radical new perspective on cultural differences that reveals why some countries, cultures, and individuals take rules more seriously and how following the rules influences the way we think and act. In *Rule Makers, Rule Breakers*, Michele Gelfand, “an engaging writer with intellectual range” (*The New York Times Book Review*), takes us on an epic journey through human cultures, offering a startling new view of the world and ourselves. With a mix of brilliantly

conceived studies and surprising on-the-ground discoveries, she shows that much of the diversity in the way we think and act derives from a key difference—how tightly or loosely we adhere to social norms. Just as DNA affects everything from eye color to height, our tight-loose social coding influences much of what we do. Why are clocks in Germany so accurate while those in Brazil are frequently wrong? Why do New Zealand’s women have the

highest number of sexual partners? Why are red and blue states really so divided? Why was the Daimler-Chrysler merger ill-fated from the start? Why is the driver of a Jaguar more likely to run a red light than the driver of a plumber’s van? Why does one spouse prize running a tight ship while the other refuses to sweat the small stuff? In search of a common answer, Gelfand spent two decades conducting research in more than fifty countries. Across

all age groups, family variations, social classes, businesses, states, and nationalities, she has identified a primal pattern that can trigger cooperation or conflict. Her fascinating conclusion: behavior is highly influenced by the perception of threat. “ A useful and engaging take on human behavior ” (Kirkus Reviews) with an approach that is consistently riveting, *Rule Makers, Ruler Breakers* thrusts many of the puzzling attitudes and actions we

observe into sudden and surprising clarity. *Euclid's Elements* (the Thirteen Books) Heinemann Educational Books Substantially updated and revised, the third edition of *Philosophical Writing* is designed to help those with little or no experience in philosophy to think and write successfully. With a systematic approach to critical thinking, this volume begins with issues concerning words, examines techniques for evaluating explanations and arguments, and concludes by applying all the skills to reading essays and writing

argumentative essays. With examples and exercises that show the scope to which critical thinking skills can and should be applied, this volume recognizes the difference in learning styles with a reader friendly approach. The volume addresses the use of language arguments, checking the evidence through observations, testimony and values and obligations, categorical syllogisms, propositional arguments, inductive

arguments, fallacies and large-scale applications. For individuals interested in an exhaustive treatment of critical thinking and writing. Suggestions to Medical Authors and A.M.A. Style Book Bedford Books With more than 400,000 copies now in print, *The Craft of Research* is the unrivaled resource for researchers at every level, from first-year undergraduates to research reporters at corporations and government offices. Seasoned researchers and educators Gregory G. Colomb and Joseph M. Williams present an updated third edition of their classic

handbook, whose first and second editions were written in collaboration with the late Wayne C. Booth. *The Craft of Research* explains how to build an argument that motivates readers to accept a claim; how to anticipate the reservations of readers and to respond to them appropriately; and how to create introductions and conclusions that answer that most demanding question, “ So what? ” The third edition includes an expanded discussion of the essential early stages of a research task: planning and drafting a paper. The authors have revised and fully updated their section on electronic research, emphasizing the need to distinguish between trustworthy sources

(such as those found in libraries) and less reliable sources found with a quick Web search. A chapter on warrants has also been thoroughly reviewed to make this difficult subject easier for researchers. Throughout, the authors have preserved the amiable tone, the reliable voice, and the sense of directness that have made this book indispensable for anyone undertaking a research project. **Minds Made for Stories** Prentice Hall

the science behind viral trends in business, marketing, and human behavior. The tipping point is that magic moment when an idea, trend, or social behavior crosses a threshold, tips, and spreads like wildfire. Just as a single sick person can start an epidemic of the flu, so too can a small but precisely targeted push cause a fashion trend, the popularity of a new product, or a drop in the crime rate. This widely acclaimed bestseller, in which Malcolm Gladwell

explores and brilliantly illuminates the tipping point phenomenon, is already changing the way people throughout the world think about selling products and disseminating ideas. “A wonderful page-turner about a fascinating idea that should affect the way every thinking person looks at the world.”

This volume reflects the development

and theoretical foundation of a new paradigm for critical thinking based on inquiry. The field of critical thinking, as manifested in the Informal Logic movement, developed primarily as a response to the inadequacies of formalism to represent actual argumentative practice and to provide useful argumentative skills to students. Because of this, the primary focus of the field has been on informal arguments rather than formal reasoning. Yet the formalist history of the field is still evident in its emphasis, with respect to both

theory and pedagogy, on the structure and evaluation of individual, de-contextualized arguments. It is our view that such a view of critical thinking is excessively narrow and limited, failing to provide an understanding of argumentation as largely a matter of comparative evaluation of a variety of contending positions and arguments with the goal of reaching a reasoned judgment on an issue. As a consequence, traditional critical thinking instruction is problematic in failing to provide the

reasoning skills that students need in order to accomplish this goal. Instead, the goal of critical thinking instruction has been seen largely as a defensive one: of learning to not fall prey to invalid, inadequate, or fallacious arguments. *One Writer's Beginnings* Bloomsbury Publishing This succinct, entertaining book covers a wide variety of critical thinking skills and offers abundant practice in applying those skills to students' writing. *The Argument*

Harper Lee's Pulitzer Prize-winning masterwork of honor and injustice in the deep South—and the heroism of one man in the face of blind and violent hatred
One of the most cherished stories of all time, *To Kill a Mockingbird* has been translated into more than forty languages, sold more than forty million copies worldwide, served as the basis for an enormously popular motion picture, and was voted one of

the best novels of the twentieth century by librarians across the country. A gripping, heart-wrenching, and wholly remarkable tale of coming-of-age in a South poisoned by virulent prejudice, it views a world of great beauty and savage inequities through the eyes of a young girl, as her father—a crusading local lawyer—risks everything to defend a black man unjustly accused of a terrible crime.

In this highly readable and provocative book, Thomas Newkirk

explodes the long standing habit of opposing abstract argument with telling stories. Newkirk convincingly shows that effective argument is already a kind of narrative and is deeply "entwined with narrative."
--Gerald Graff, former MLA President and author of *Clueless in Academe*
Narrative is regularly considered a type of writing—often an "easy" one, appropriate for early grades but giving way to argument and analysis in later grades. This groundbreaking book challenges all that. It invites readers to imagine narrative as something more—as the primary way we understand our world and ourselves. "To deny the centrality of

narrative is to deny our own nature," Newkirk explains. "We seek companionship of a narrator who maintains our attention, and perhaps affection. We are not made for objectivity and pure abstraction--for timelessness. We have 'literary minds' that respond to plot, character, and details in all kind of writing. As humans, we must tell stories." When we are engaged readers, we are following a story constructed by the author, regardless of the type of writing. To sustain a reading--in a novel, an opinion essay, or a research article-- we need a "plot" that helps us comprehend specific information, or experience the significance of an argument. As Robert

Frost reminds us, all good memorable writing is "dramatic." *Minds Made for Stories* is a needed corrective to the narrow and compartmentalized approaches often imposed on schools--approaches which are at odds with the way writing really works outside school walls. Don't Understand, Deborah Tannen showed why talking to someone of the opposite sex can be like talking to someone from another world. Now Tannen is back with another groundbreaking book, this time widening her lens to examine the way we communicate in public--in the media, in politics, in our courtrooms, and classrooms--once again letting us see in a new way forces that have powerfully shaped our lives. The war on drugs, the battle of the sexes, political turf combat--in the argument culture, war metaphors pervade our talk and influence our thinking. We approach anything we need to accomplish as a fight between two

opposing sides. In this fascinating book, Tannen shows how deeply entrenched this cultural tendency is, the forms it takes, and how it affects us every day--sometimes in useful ways, but often causing damage. The Argument Culture is a remarkable book that will change forever the way you perceive--and communicate with--the world. Newly streamlined and featuring e-Pages that take argument online, its signature engaging, informal, and jargon-free instruction emphasizes cultural currency, humor, and visual argument."--Back cover. Spurious Correlations Bedford/St. Martin's A Theory of Argument is an advanced textbook intended for students in philosophy, communications studies and linguistics who have completed at least one course in argumentation theory, information logic, critical thinking or formal logic. Containing nearly 400 exercises, Mark Vorobej develops a novel approach to

argument interpretation and evaluation. One of the key themes of the book is that we cannot succeed in distinguishing good argument from bad arguments until we learn to listen carefully to others. Part I develops a relativistic account of argument cogency that allows for rational disagreement. Part II offers a comprehensive and rigorous account of argument diagramming. Hybrid arguments are contrasted with linked and convergent arguments, and a novel technique is introduced for graphically recording disagreements with authorial claims.
