The trading, selling, and buying of personal transport has changed little over the past one hundred years. Whether horse trading in the early twentieth century or car buying today, haggling over prices has been the common practice of buyers and sellers alike. *Horse Trading in the Age of Cars* offers a fascinating study of the process of buying an automobile in a historical and gendered context. Steven M. Gelber convincingly demonstrates that the combative and frequently dishonest culture of the showroom floor is a historical artifact whose origins lie in the history of horse trading. Bartering and bargaining were the norm in this predominantly male transaction, with both buyers and sellers staking their reputations and pride on their ability to negotiate the better deal. Gelber comments on this point-of-sale behavior and what it reveals about American men. Gelber's highly readable and lively prose makes clear how this unique economic ritual survived into the industrial twentieth century, in the process adding a colorful and interesting chapter to the history of the automobile.

New Car Buying Guide 2000 National Academies Press

For a century, almost all light-duty vehicles (LDVs) have been powered by internal combustion engines operating on petroleum fuels. Energy security concerns about petroleum imports and the effect of greenhouse gas (GHG) emissions on global climate are driving interest in alternatives. *Transitions to Alternative Vehicles and Fuels* assesses the potential for reducing petroleum consumption and GHG emissions by 80 percent across the U.S. LDV fleet by 2050, relative to 2005. This report examines the current capability and estimated future performance and costs for each vehicle type and non-petroleum-based fuel technology as options that could significantly contribute to these goals. By analyzing scenarios that combine various fuel and vehicle pathways, the report also identifies barriers to implementation of these technologies and suggests policies to achieve the desired reductions. Several scenarios are promising, but strong, and effective policies such as research and

development, subsidies, energy taxes, or regulations will be necessary to overcome barriers, such as cost and consumer choice.

Buy the Paperback version of this book and get the eBook version included for FREE If you are planning on buying a car, I have no doubt that you are excited and that you can't wait to start racking up the miles in your new car. However, buying a car is a high-ticket purchase and it is very wise to know how to approach such a big purchase so that you get what you want while also getting the best price without unneeded extra costs. That is what this book is all about. I don't know anyone who looks forward to interacting with a car salesperson, or any salesperson. However, it is one of the things that inevitably have to be dealt with. In the past, car salespeople had the

edge because there wasn't a lot of information out there which may, otherwise, enable the customer to have leverage in the negotiation process so that they don't get taken advantage of. However, we live in a different time in which information is abundant and ignorance is a choice. The tricks that car salespeople use are no longer a secret. For the price of a coffee, you can purchase information, such as the one within this book, that can help you to avoid paying thousands of extra dollars in the process of buying a car. Imagine what you could do with that extra cash. In this book, you can expect to learn about: -Avoiding dealership scams -Inspecting a car before buying it -How to not to fall for the tricks of car salespeople -Buying a car in ways other than through a car dealership -And much more! If you are ready to get through the process of buying a car as fast as possible and with minimum hassle, so that you can get to the fun part, which is the driving itself, then scrolling over to the BUY button and clicking it is the first step towards that.

The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to

the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for

Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.
