Fundamentals of Foods, Nutrition and Diet Therapy John Wiley & Sons

Yes, you are what you eat. For everyone who wonders why, in this era of advanced medicine, we still suffer so much serious illness, *Food and Healing* is essential reading. "An eminently practical, authoritative, and supportive guide to making everyday decisions about eating that can transform our lives. *Food and Healing* is a remarkable achievement." —Richard Grossman, Director, The Health in Medicine Project, Montefiore Medical Center

Annemarie Colbin, founder of New York's renowned Natural Gourmet Cookery School and author of *The Book of Whole Meals*, argues passionately that we must take responsibility for our own health and rely less on modern medicine, which still seems to focus on trying to cure rather than prevent illness. Eating well, she shows, is the first step toward better health. Drawing on an impressive range of thinking—from Eastern philosophy to current medical journals—Colbin shatters many myths not only about the "Standard American Diet" but also about some of the quirky and unhealthy food fads of recent years. What emerges is one of the first complete works on:

- How food affects our moods
- The healing qualities of specific foods
- The role of diet in preventing illness
- How to tailor a diet approach that is right for you

"I recommend it to my patients. . . . It's an excellent book to help people understand the relationship between what they eat and how they feel." —Stephen Rechtstaffen, M.D. Director, Omega Institute for Holistic Studies "Have a look at this important, well-thought-out book." —Bon Appetit

Contemporary Maternal-Newborn Nursing Care New Age International

Why are spicy cuisines characteristic of hot climates? Does our stomach or our brain tell us when it is time to eat? And how do we

decide if bugs are food? Employing a learner-centered approach, this introduction to the psychological mechanisms of consumption engages readers with questions and cross-cultural examples to promote critical analysis and evidence-based comprehension. The discipline of psychology provides an important perspective to the study of eating, given the remarkable complexity of our food environments (including society and culture), eating habits, and relationships with food. As everything psychological is simultaneously biological, the role of evolutionary pressures and biopsychological forces are bases to explore complex processes within the book, such as sensation and perception, learning and cognition, and human development. The authors illuminate contemporary eating topics, including the scope and consequences of overnutrition, the aetiology of eating disorders, societal focus on dieting and body image, controversies in food policy, and culture-inspired cuisine. Supplemental resources and exercises are provided in a pedagogically-focused companion website.
