Control System Interview Questions and Answers
Answer: Control system is a collection of physical elements connected together to serve an objective. The output and input relations of various physical systems are governed by differential equations. Mathematical model of a control system constitutes set of differential equations. The response of the output of the

system can be studied by solving the differential equations for various input conditions.

Questions Answers

In principle, thermometers made of different material (e.g., coloured alcohol thermometers) might be expected to give different intermediate readings due to different expansion properties; in practice the substances used are chosen to have reasonably linear expansion characteristics as a function of true

thermodynamic temperature, and so give similar results. Electrical Machines I Viva Short Questions and Answers PDF ... Q.8. What do you mean by compensation of a control system? Answer: If a system is to be redesigned so as to meet the required specifications, it is necessary to alter the system by adding an external device to it. Such a redesign or alteration of system using an additional suitable device (compensator) is called compensation of a control system ... 106 TOP CONTROL
