Amid widespread concern that our approach to testing and grading undermines education, two experts explain how schools can use assessment to support, rather than compromise, learning. Anyone who has ever crammed for a test, capitulated to a grade-grubbing student, or fretted over a child's report card knows that the way we assess student learning in American schools is freighted with unintended consequences. But that's not all. As experts agree, our primary assessment technologies—grading, rating, and ranking—don't actually provide an accurate picture of how students are doing in school. Worse, they distort student and educator behavior in ways that undermine learning and exacerbate inequality. Yet despite widespread dissatisfaction, grades, test scores, and transcripts remain the currency of the realm. In *Off the Mark*, Jack Schneider and Ethan Hutt explain how we got into this predicament, why we remain beholden to our outmoded forms of assessment, and what we can do to change course. As they make clear, most current attempts at reform won't solve the complex problems we face. Instead, Schneider and Hutt offer a range of practical reforms, like embracing multiple measures of performance and making the so-called permanent record "overwritable." As they explain, we can remake our approach in ways that better advance the three different purposes that assessment currently serves: motivating students to learn, communicating meaningful information about what young people know and can do, and synchronizing an otherwise fragmented educational system. Written in an accessible style for a broad audience, *Off the Mark* is a guide for everyone who wants to ensure that assessment serves the fundamental goal of education—helping students learn.

In a pioneering work, Jeffrey Fear overturns the dominant understanding of German management as "backward" relative to the U.S. and uncovers an autonomous and sophisticated German managerial tradition. Beginning with founder August Thyssen—the Andrew Carnegie of Germany—Fear traces the evolution of management inside the Thyssen-Konzern and the Vereinigte Stahlwerke (United Steel Works) between 1871 and 1934. Fear focuses on the organization and internal dynamics of the company. He demonstrates that initiatives often flowed from middle managers, rather than from the top down. Shattering stereotypes of the overly bureaucratic and rigid German firm, Fear portrays a decentralized and flexible system that underscores the dynamic and entrepreneurial nature of German business. He fundamentally revises the scholarship on Alexander Gerschenkron and Germany's Sonderweg, and critiques Max Weber's concept of the corporation and capital accounting. He develops a loosely coupled relationship among enterprise strategy, organization, the structure of responsibility, and its accounting system, which links information, knowledge, and power inside the firm. This method of organizing control is central to understanding corporate governance. Original and provocative, this work will generate much debate among historians, organizational theorists, and management and accounting scholars.
