machine controller. The first step was to create a new profile to save the machine settings. This was done as part of the installation process to protect the machine settings. If this was not done please review the

" Setting up the Profile " section of this manual. What is a Motion Controller? Technical Summary for Engineers

A servo controller is the heart of a servo system. A typical servo system consists of a motor, feedback device and the controller. The control circuitry typically involves a motion controller, which generates the motion profile for the motor, and a motor drive which supplies power to the motor based on the commands from the motion controller.
