Electrical Engineering Manual Henry Holt and Company (BYR)
In a series of entertaining

essays, geoscientist Jelle Zeilinga de Boer describes how early settlers discovered and exploited Connecticut's natural resources. Their successes as well as failures form the very basis of the state's history: Chatham's gold played a role in the acquisition of its Charter, and Middletown's lead helped the colony gain its freedom during the Revolution. Fertile soils in the Central Valley fueled the state's development into an agricultural power house, and iron ores discovered in the western highlands helped trigger its manufacturing eminence. The Statue of Liberty, a quintessential symbol of America, rests on Connecticut's Stony Creek granite. Geology not only shaped the state's physical landscape, but also provided an economic base and played a cultural role by inspiring folklore, paintings, and poems. Illuminated by 50 illustrations and 12 color plates, *Stories in Stone* describes the marvel of Connecticut's geologic diversity and also recounts the impact of past climates, earthquakes, and meteorites on the lives of the people who made Connecticut their home.

The Official DVSA Theory Test for Motorcyclists
Digital Press
This book chronicles artist Sanford Wurmfeld's now legendary color class, which he seeded, developed, and taught at Hunter College in New York City for more than two decades. The "Color Seminar" was geared to both artists and art historians alike, and Wurmfeld taught it each semester for twenty-five years, with his last class taking place in the spring of 2012, the year he retired. All told, more than 500 individuals participated in his elective course, and its extensive and continuing impact on contemporary art discourse, and on abstract painting in particular, cannot be overstated. From studios to classrooms, former students, now established artists in their own right, have been teaching their own interpretations of this course for years now in visual arts and curatorial programs across the country. Wurmfeld's new

book begins with a discussion of afterimages and related experiments concerning the nature of color experience. It then works its way through theoretical ideas about color and the phenomenology of perception, finally ending with a discussion of color as content in 20th and 21st century abstraction -- what Wurmfeld terms presentational art -- with its emphasis on artists crafting the viewer experience through an active analysis of color. The book concludes with an exhaustive bibliography of additional resources for readers to continue their own self-directed research into color history and experience.
