An innovative new valuation framework with truly useful economic indicators The

End of Accounting and the Path Forward for Investors and Managers shows how the ubiquitous financial reports have become useless in capital market decisions and lays out an actionable alternative. Based on a comprehensive, large-sample empirical analysis, this book reports financial documents' continuous deterioration in relevance to investors' decisions. An enlightening discussion details the reasons why accounting is losing relevance in today's market, backed by numerous

examples with real-world impact. Beyond simply identifying the problem, this report offers a solution—the Value Creation Report—and demonstrates its utility in key industries. New indicators focus on strategy and execution to identify and evaluate a company's true value-creating resources for a more up-to-date approach to critical investment decision-making. While entire industries have come to rely on financial reports for vital information, these documents are flawed and insufficient

when it comes to the way investors and lenders work in the current economic climate. This book demonstrates an alternative, giving you a new framework for more informed decision making. Discover a new, comprehensive system of economic indicators Focus on strategic, value-creating resources in company valuation Learn how traditional financial documents are quickly losing their utility Find a path forward with actionable, up-to-date information Major

corporate decisions, such as restructuring and M&A, are predicated on financial indicators of profitability and asset/liabilities values. These documents move mountains, so what happens if they're based on faulty indicators that fail to show the true value of the company? *The End of Accounting and the Path Forward for Investors and Managers* shows you the reality and offers a new blueprint for more accurate valuation.

This book describes how auditors exercise different levels of professional skepticism and how they are exposed to different types of affective information on clients' behavior. Based on the author's empirical study

of 56 auditors, it shows that auditors' skepticism and affective reactions towards a client interact to influence their appraisal of valuation problems. It also suggests that the effects of auditors' affective reactions on their skeptical judgments depend on the level of risk in the audit engagement.

This book expands on law-related research by examining the legal aspects of sustainability with a focus on the impact on business

strategies. It recognizes that firms must adopt an integrated approach to law and sustainability, considering multiple disciplines and goals, and serve as a forum for bringing together scholarship from fields such as environmental law, energy, government regulation and intellectual property. Firms increasingly have an interest in transitioning to sustainable business practices that take into consideration the fact that global resources are finite and will be increasingly scarce. They acknowledge that current actions have social, economic and environmental consequences and employ options to ensure that future generations have the same options and benefits. Examples of

sustainable practices increasingly employed by firms include the institutionalization of “whole life-cycle” analysis in marketing and product design, utilization of sustainable inputs and energy sources, tracking and reporting sustainability performance, attempting the valuation of future generation prosperity and happiness as a discounting mechanism, and integrating sustainability into firm culture and management goals. It is clear that law and regulation have an extremely important role to play in the transition to more sustainable business practices. Broadly stated, law can provide structure for firms responding to forces that pull transition by enabling sustainability leadership and competitive advantage through funding models, intellectual property rights and collaboration means. Additionally, law can work to push transition by compelling firms to act through regulatory structures, accounting and governance mechanisms.
