Special Features: • Presents the latest theoretical and empirical developments in corporate finance. • Combines previous textbook and professional editions into new second edition. •

Incorporates more references to European, Asian and Latin American institutions since these are growing financial markets. • Discusses the recent tax law change that reduces the tax rate on

dividends, explaining its impact on corporate financial theory. • Updates both the numbers and the narrative for the cases on Disney, Aracruz Cellulose, Deutsche Bank and a private bookstore in New York. • Looks at how to assess risk and develop a risk profile for a firm, examines how to fund projects, and establishes a process that can be used to decide how much cash should be taken out of the business. About The Book: This hands-on guide to corporate finance focuses on converting the theory and models in corporate finance into tools that can be used to analyze, understand and help any business. The second edition classifies all decisions made by any business into three groups: decisions on where to invest the resources or funds that the

business has raised, decisions on where and how to raise funds to finance these investments, and decisions on how much and in what form to return funds back to the owners. All sections of the book are traceable to this framework. Also, four very different firms are used as examples throughout the text to illustrate the universality of corporate financial principles across different firms in different markets and across different types of decisions.

The Handbook of Financing Growth John Wiley & Sons

Convert Theory into Solutions: A Corporate Finance Reality Check This hands-on guide to corporate finance focuses on converting the theory and models in corporate finance into tools that can be used to analyze, under stand and help any business. Applied Corporate Finance provides a user's perspective to corporate finance, by posing the three major questions that every business has to answer,

and then providing the tools and the analytical techniques needed to answer them. The three questions are- * Where do we invest our resources? (The Investment Decision) The first part of the book looks at how to assess risk and develop a risk profile for a firm, convert this risk profile into a hurdle rate, and develops the basic rules that need to be followed in estimating the returns on any investment. * How should we fund these investments? (The Financing Decision) Firms generally can use debt, equity or some combination of the two to fund projects. This part of the book examines the relationship between this choice and the hurdle rate to be used in analyzing projects, and presents ways in which the financing decision can be used to maximize firm value. It also sets up a framework for picking the right kind of security for any firm. * How much cash can and should we return to the owners? (The Dividend Decision) The third part of the book establishes a process that can be used to decide how much cash should be taken out of the business, and in what form - dividends or stock buybacks. The final chapter in the book ties in the value of the firm to these three decisions, and provides insight into how firms can enhance value. In summary, this is a book about coming up with real solutions to real problems, using real-time data on real companies.

An in-depth, enlightening look at the integrated reporting movement The Integrated Reporting Movement explores the meaning of the concept, explains the forces that provide momentum to the associated movement, and examines the motives of the actors involved. The book posits integrated reporting as a key mechanism by which companies can ensure their own long-term sustainability by contributing to a sustainable society. Although integrated reporting has seen substantial development due to the support of companies, investors, and the initiatives of a number of NGOs, widespread

regulatory intervention has yet to materialize. Outside of South Africa, adoption remains voluntary, accomplished via social movement abetted, to varying degrees, by market forces. In considering integrated reporting's current state of play, the authors provide guidance to ensure wider adoption of the practice and success of the movement, starting with how companies can improve their own reporting processes. But the support of investors, regulators, and NGOs is also important. All will benefit, as will society as a whole. Readers will learn how integrated reporting has evolved over the years, where frameworks and standards are today, and the practices that help ensure effective implementation—including, but not limited to an extensive discussion of information technology's role in reporting and the importance of corporate reporting websites. The authors introduce the concepts of an annual board of directors' "Statement of Significant Audiences and Materiality" and a "Sustainable Value Matrix" tool that translates the statement into management decisions. The book argues that the appropriate combination of market and regulatory forces to speed adoption will vary by country, concluding with four specific recommendations about what must be done to accelerate high quality adoption of integrated reporting around the world.

This book was written originally to fulfill a need that conventional corporate finance books were not filling – to provide practical and succinct advice on how to do corporate finance rather than debate theory. It was intended for both practitioners who have little patience for extended discourses on models and assumptions and for instructors/students who wanted to focus on applying corporate finance to real companies. The book tells a story, which essentially summarizes the corporate finance view of the world. It classifies all decisions made by any business into three groups—decisions on where to invest the resources or funds that the business has raised, either internally or externally (the investment decision), decisions on where and how to raise funds to finance these investments (the financing decision) and decisions on how much and in what form to return funds back to the owners (dividend decision).
