Solutions Manual to Accompany Fundamentals of Corporate Finance McGraw-Hill/Irwin

Corporate Finance: Core Principles and Applications was developed for the graduate (MBA) level as a concise, up-to-date, and to-the-point product, the majority of which can be realistically covered in a single term or course. To achieve the objective of reaching out to the many different types of students and the varying course settings, corporate finance is distilled down to its core, while maintaining a decidedly modern approach. Purely theoretical issues are downplayed, and the use of extensive and elaborate calculations is minimized to illustrate points that are either intuitively obvious or of limited practical use. The goal was to focus on what students really need to carry away from a principles course. A balance is struck by introducing and covering the essentials, while leaving more specialized topics to follow-up courses. Net present value is treated as the underlying and unifying concept in corporate finance. Every subject covered is firmly rooted in valuation, and care is taken throughout to explain how particular decisions have valuation effects. Also, the role of the financial manager as decision maker is emphasized, and the need for managerial input and judgment is stressed.

Finance Reality Check This

hands-on guide to corporate finance focuses on converting the theory and models in corporate finance into tools that can be used to analyze, understand and help any business. Applied Corporate Finance provides a user's perspective to corporate finance, by posing the three major questions that every business has to answer, and then providing the tools and the analytical techniques needed to answer them. The three questions are- * Where do we invest our resources? (The Investment Decision) The first part of the book looks at how to assess risk and develop a risk profile for a firm, convert this risk profile into a hurdle rate, and develops the basic rules that need to be followed in estimating the returns on any investment. * How should we fund these investments? (The Financing Decision) Firms generally can use debt, equity or some combination of the two to fund projects. This part of the book examines the relationship between this choice and the hurdle rate to be used in analyzing projects,

and presents ways in which the financing decision can be used to maximize firm value. It also sets up a framework for picking the right kind of security for any firm. * How much cash can and should we return to the owners? (The Dividend Decision) The third part of the book establishes a process that can be used to decide how much cash should be taken out of the business, and in what form - dividends or stock buybacks. The final chapter in the book ties in the value of the firm to these three decisions, and provides insight into how firms can enhance value. In summary, this is a book about coming up with real solutions to real problems, using real-time data on real companies.

Addison Wesley Longman
Corporate Finance, by Ross, Westerfield, and Jaffe emphasizes the modern fundamentals of the theory of finance, while providing contemporary examples to make the theory come to life. The authors aim to present corporate finance as the working of a small number of integrated and powerful intuitions, rather than a collection of unrelated topics. They develop the central concepts of modern finance: arbitrage, net present value, efficient markets, agency theory, options, and the trade-off between risk and return, and use them to explain corporate finance with a balance of theory and application. The well-respected

author team is known for their clear, accessible presentation of material that makes this text an excellent teaching tool. The ninth edition has been fully updated to reflect the recent financial crisis and is now accompanied by Connect, an exciting new homework management system.

Aswath Damodaran, distinguished author, Professor of Finance, and David Margolis, Teaching Fellow at the NYU Stern School of Business, have delivered the newest edition of Applied Corporate Finance.

This readable text provides the practical advice students and practitioners need rather than a sole concentration on debate theory, assumptions, or models. Like no other text of its kind, Applied Corporate Finance, 4th Edition applies corporate finance to real companies. It now contains six real-world core companies to study and follow. Business decisions are classified for students into three groups: investment, financing, and dividend decisions.
