This, the 30th edition of the "United States Government Printing Office Style Manual," is the first revision to this authoritative style manual since 2002. The "GPO Style Manual, as it is popularly known, is issued under the authority of section 1105 of Title 44 U.S.C., which requires the Public Printer, as head of the GPO to "determine the form and style in which the printing...ordered by a department is executed...having proper regard to economy, workmanship, and the purposes for which the work is needed." The Manual is prepared by the GPO Style Board, composed of proofreading, printing, and Government documents specialists from within GPO, where all congressional publications, and many other key Federal Government documents are prepared. The first "GPO Style Manual" appeared in 1894. It was developed originally as a printer's stylebook to standardize word and type treatment and remains so today. Through successive editions, however, the "GPO Style Manual" has come to be widely recognized by writers and editors both within and outside the Federal Government as one of the most useful resources in the editorial arsenal. This new, revised version of the "GPO Style Manual" has been thoroughly redesigned to make it more modern and easier to read, and the content has been updated generally throughout in keeping with current usage.

After Southeast Asia, analysts and force planners came to the realization that there was a fundamental difference between search and rescue (SAR) in a permissive area and in an area that was not permissive (i.e., under enemy control). This second condition is now called combat search and rescue or CSAR. At the time of Desert Storm, the two forms of rescue were defined thusly: Search and Rescue (SAR): Use of aircraft, surface craft, submarines, personnel, and equipment to locate and recover personnel in distress on land or at sea. Combat Search and Rescue (CSAR): A specialized SAR task performed by rescue-capable forces to effect recovery of distressed personnel from hostile territory during contingency operations or wartime.² The development of this rescue capability has been well established. Dr. Robert Futrell documented our efforts in Korea in *The United States Air Force in Korea, 1950-1953*. His work was followed by Dr. Earl Tilford's *Search and Rescue in Southeast Asia*, which eloquently chronicled the heroic efforts of the rescue crews in that conflict who brought back literally thousands of airmen. It extensively documented what is now considered the "golden age" of rescue. This work is meant to follow in those traditions and will focus on our CSAR efforts in the Persian Gulf War of 1991, or more specifically, the period of Operation Desert Storm, 17 January to 28 February 1991. Overall, CSAR in Desert Storm appears to have been a mixed bag. Because of advances in precision weaponry, Global Positioning System (GPS) technology, countermeasures, and

training, relatively few coalition aircraft were shot down. Forty-three coalition aircraft were lost in combat, most over high-threat areas. Eighty-seven coalition airmen, soldiers, sailors, and marines were isolated in enemy or neutral territory. Of that total, 48 were killed, one is still listed as missing, 24 were immediately captured, and 14 were exposed in enemy territory. Of those who survived, most landed in areas controlled by enemy troops. Of the few actually rescueable, six were not rescued for a variety of reasons, but primarily because of limitations in CENTAF's ability to locate them accurately and in a timely manner.
