NEW YORK TIMES BESTSELLER • Have you ever wondered what it would be like to find yourself strapped to a giant rocket that's about to go from zero to 17,500 miles per hour? Or to look back on Earth from outer space and see the surprisingly precise line between day and night? Or to stand in front of the Hubble Space Telescope, wondering if the emergency repair you're about to make will inadvertently ruin humankind's chance to unlock the universe's secrets? Mike Massimino has been there, and in *Spaceman* he puts you inside the suit, with all the zip and buoyancy of life in microgravity. Massimino's childhood space dreams were born the day Neil Armstrong set foot on the moon. Growing up in a working-class Long Island family, he catapulted himself to Columbia and then MIT, only to flunk his first doctoral exam and be rejected three times by NASA before making it through the final round of astronaut selection. Taking us through the surreal wonder and beauty of his first spacewalk, the tragedy of losing friends in the Columbia shuttle accident, and the development of his enduring love for the Hubble Telescope—which he and his fellow astronauts were tasked with saving on his final mission—Massimino has written an ode to never giving up and the power of teamwork to make anything possible. *Spaceman* invites us into a rare, wonderful world where science meets the most thrilling adventure, revealing just what having “the right stuff” really means.

The Cassini Division Spectra

With visionary epics like *The Stone Canal*, *The Cassini Division*, and *Cosmonaut Keep*, award-winning Scottish author Ken MacLeod has led a revolution in contemporary science fiction,

In the aftermath of the *Hard Rapture*--a cataclysmic war sparked by the explosive evolution of Earth's artificial intelligences into godlike beings--a few remnants of humanity managed to survive. Some even prospered. Lucinda Carlyle, head of an ambitious clan of galactic entrepreneurs, had carved out a profitable niche for herself and her kin by taking control of the Skein, a chain of interplanetary star-gates left behind by the posthumans. Cosmonaut Keep Orbit

The radical history of space exploration from the Russian Cosmists to Elon Musk. Many societies have imagined going to live in space. What they want to do once they get up there - whether conquering the unknown, establishing space "colonies," privatising the moon's resources - reveals more than expected. In this fascinating radical history of space exploration, Fred Scharmen shows that often science and fiction have combined in the imagined dreams of life in outer space, but these visions have real implications for life back on earth. For the Russian Cosmists of the 1890s space was a place to pursue human perfection away from the Earth. For others, such as Wernher Von Braun, it was an engineering task that combined, in the Space Race, the Cold War, and during World War II, with destructive geopolitics. Arthur C. Clark in his speculative books offered an alternative vision of wonder that is indifferent to human interaction. Meanwhile NASA planned and managed the space station like an earthbound corporation. Today, the market has arrived into outer space and exploration is the plaything of superrich technology billionaires, who plan to privatise the mineral wealth for themselves. Are other worlds really possible? Bringing these figures and ideas together reveals a completely different story of our relationship with outer space, as well as the dangers of our current direction of extractive capitalism and colonisation.

This is a work sure to keep the reader on the edge of her seat.' - Romantic Times Bookclub 'For my money, Ken MacLeod is the current champion of the very smartest kind of New Space Opera... every variation on his themes produces something worth re-reading.' - Locus Centuries after its catastrophic Deliverance, humanity is again reaching into space. And one young scholar working in the space ship yard, Clovis Colha Gree, could make the difference between success and failure. For his mysterious lover, Merrial, has seduced him into the idea of extrapolating the ship's future from the dark archives of the past. A past in which, centuries before, Myra Godwin faced the end of a different space age - her rockets redundant, her people rebellious, and her borders defenceless against the Sino-Soviet Union. As Myra appealed to the falling empires of the West for help, she found history turning on her own dubious past - and on her present decisions. Decisions which, centuries later, will determine the future of the new space age. Merrial's people, the itinerant computer engineers, know this. And they know that the truth they seek lies within the secret files left by Myra Godwin. Set hundreds of years in the future, THE SKY ROAD is the astonishing story of the dawn of a new space

age, from the most exciting British SF author to have emerged in recent years.
