**Accounting Disrupted: How Digitalization is changing Finance** delivers a powerful analysis of the new technological forces buffeting the accounting profession and identifies key pathways to responding to the challenges. Al Bhimani, distinguished accountant, academic, and author, shows readers how established business fundamentals are being eclipsed and that accounting has not been spared. You'll learn: How the new realities of digitalization, including big data and AI, are affecting audit work and financial management practices How learning fast about and from more diverse data sources is essential to the new accounting environment Why accounting information must start to speak to what will take place rather than about financial activities that have occurred What finance must do in a world of changing risks, data growth, fast digitization, and increased regulation The author makes a compelling case that accounting now faces a crunch: it needs to reshape itself from the core because conventional financial analysis is proving too cumbersome and slow for executives in digitalized organizations.
