Accounting is the
first book to provide
a practical, hands-on
approach to its three
key areas: full-cost
accounting,

differential cost accounting, and management control systems. Focusing less on line-item detail and more on real-world application, it provides managers with the tools they need to interpret key financial information and improve overall performance.

Companies more

and more compete as integrated supply chains rather than as individual firms. Success of the entire supply chain (SC) determines the economic well-being of the individual company. With management attention shifting to supply chains, the role of management accounting (MAC) naturally must extend to the cross-company layer as well. MAC can make a significant contribution to SC success, but is faced with a

multitude of problems and challenges when trying to do so. Students both in supply chain management (SCM) or management accounting (MAC) respectively, are typically not familiarized with these issues. There is still a clear gap in higher education teaching when it comes to management accounting in a cross-company setting. This textbook wants to fill the gap. It targets students who are already familiar with the fundamentals of

accounting and now want to extend their expertise in the field of cross-company (or network) management accounting – with supply chains being the typical case in point. Practitioners might draw valuable insights from the text as well. This textbook has been developed for university courses conducted in English language, especially in Germany, Austria and Switzerland. Additional

Cost Management Accounting McGraw Hill Professional Management Accounting is written for students in international Business Management study programs. It covers the widely applied syllabus of Cost Accounting and Management Accounting at universities on

bachelor's and master's level. The book is based on more than 20 years' academic teaching experience in Germany and at international universities in South Africa, Malaysia, China, the Netherlands and South Korea. In this text book, the application of methods and instruments comes first. Management Accounting follows a case study based approach. All cases are taken from previous exam papers and explained in detail. The text book starts with a case

study of a manufacturing company and compares Financial Accounting to Management Accounting. It covers two point of views: (1) a General Management view, with aspects of business planning, cost-volume-profit analysis, degree of operating leverage, mergers and cross-border acquisitions and risk valuation. (2) a Cost Accounting view with Management Accounting systems, flexible budgeting, cost allocations, performance

measurement and monitoring, reporting, calculation, manufacturing accounting (job order and process costing), activity based costing and multi-level contribution margin Accounting. On the UVK website, numerous exam tasks and complete solutions thereto are available in English. May 1990 Examination.
