On the Pacific front during World War II, strange messages were picked up by American and Japanese forces on land and at sea. The messages were totally unintelligible to everyone except a small select group within the Marine Corps: the Navajo code talkers-a group of Navajos communicating in a code based on the Navajo language. This code, the first unbreakable one in U.S. history, was a key reason that the Allies were able to win in the Pacific. Navajo Code Talkers tells the story of the special group, who proved themselves to be among the bravest, most valuable, and most loyal of American soldiers during World War II.

Local Food Systems; Concepts, Impacts, and Issues ABC-CLIO
This comprehensive overview of local food systems explores alternative definitions of local food, estimates market size and reach, describes the characteristics of local consumers and producers, and examines early indications of the economic and health impacts of local food systems. Defining ¿local¿ based on marketing arrangements, such as farmers selling directly to

consumers at regional farmers¿ markets or to schools, is well recognized. Statistics suggest that local food markets account for a small, but growing, share of U.S. agricultural production. For smaller farms, direct marketing to consumers accounts for a higher percentage of their sales than for larger farms. Charts and tables.

Steenkamp introduces the global brand value chain and explains how brand equity factors into shareholder value. The book equips executives with techniques for developing strategy, organizing execution, and measuring results so that your brand will prosper globally. What sets strong global brands apart? First, they generate more than half their revenue and most of their growth outside their home market. Secondly, their brand equity is responsible for a massive percentage of their firm's market value. Third, they operate as single brands everywhere on the planet. We find them in B2C and B2B industries, among large and small companies, and among established companies and new businesses. The stewards of these brands have a set of skills and knowledge that sets them apart from the typical corporate marketer. So what's their secret? In a world that is globalizing, but not yet globalized, how do you build a powerful global brand that resonates universally but also accommodates local nuances? How do you ensure that it is dynamic and flexible enough to change at market speed? World-class marketing expert Jan-Benedict Steenkamp has studied global brands for over 25 years on six continents. He has distilled their practices into eight tools that you can start using today. With case studies from around the world, Steenkamp's book is provocative and timely. Global Brand Strategy speaks to three types of B2C and B2B managers: those who want to strengthen already strong global brands, those who want to launch their brands globally and get results, and those who need to revive their global brand and stop the bleeding.
Navajo Code Talkers Walter de Gruyter GmbH & Co KG
The food industry is a notoriously complex economic sector that has not received the attention it deserves within legal scholarship. Production and distribution of food is complex because of its polycentric character (as it operates at the intersection of different public policies) and its dynamic evolution and transformation in the last few decades (from technological and governance perspectives). This volume introduces the global value chain approach as a useful way to analyse competition law and applies it to the operations of food chains and the challenges of their regulation. Together, the chapters not only provide a comprehensive mapping of a vast comparative field, but also shed light on the intricacies of the various policies and legal fields in operation. The book offers a conceptual and theoretical framework for competition authorities, companies and academics, and fills a massive gap in the competition policy literature dealing with global value chains and food.

Seminar paper from the year 2012 in the subject Business economics - Business Management, Corporate Governance, University of Southern California, language: English, abstract: In this paper, we first use SWOT Analysis and Porter's five-force analysis to fully analyze Kodak's current position in the market. In addition, we discuss financial strategy, marketing strategy and several suggestions on the changing of company culture. Globalization and shifts in technology have changed the thinking of consumers. Digital cameras and cell phones have created a shift in the way most people take pictures and retrieve their photos. Kodak failed in reinventing the company's core business model successfully during the past few years. The growth of new core business didn't make up the effects of Kodak's fast-fading film revenues. Kodak is currently in serious financial trouble: quickly going through cash, selling patents and accessing credit lines. We are facing a difficult task in what can be considered one of the hardest financial times Kodak has ever been through.

A business model is a critical element for any startup's success as it is what unlocks value in the long term. In a way, developing a business model isn't only about monetization strategies. Indeed, that is way more holistic. To develop a business model companies need to create value for several stakeholders. Thus, a business model is about what makes users go back to your app, service, or product. It is about how businesses can get value from your solution. It is about how suppliers grow their business through it. A business model is all those things together. In short, when those pieces come together, that is when you can say to have a business model.
