Seminar paper from the year 2017 in the subject Business economics - Investment and Finance, grade: 1,3, Post University, course: Financial Modeling, language: English, abstract: The paper will summarize the findings of the sensitivity analysis of Tesla Motors Inc. (Tesla) for the last four years. In doing so, the information presented are described, methodically categorized and then analyzed. In a first step the overall situation of Tesla is analyzed. In a next step, the analysis focuses on different ratios based upon the financial statement, balance sheet and cash flow analysis. Then, additional observations in form of a competitor analysis are introduced. Finally, a conclusion will show that Tesla, while showing great promise, should improve upon its economic efficiency and effectiveness. Therefore, Telsa should provide an adjusted/revised action plan before investors should consider investing in the company.

This fictional U.S.-based case requires students to evaluate an asset-replacement decision in relation to whether a company should keep an asset it purchased and put into operation two years ago or whether it should replace that asset with a newer, more efficient model. Increasingly, accountants are being called upon to be “ value integrators, ” that is, to integrate knowledge and skills from across a variety of disciplines. To complete the XYZ case successfully, students will need to draw upon and integrate concepts from accounting (determining relevant cash flows), finance (modeling-related issues associated with the analysis of a capital budgeting decision), and tax (various real-world considerations). In addition, students are asked to complement their financial analysis with strategic and/or qualitative considerations associated with the capital investment proposal under consideration. Extensive use of Microsoft Excel is required to complete the case, including the use of Excel to deal with the issue of uncertainty. A final requirement of the case is to prepare an effective document (or table) that summarizes the various analyses students conduct in conjunction with the present case analysis.

This book explains the financial appraisal of capital budgeting projects. The coverage extends from the development of basic concepts, principles and techniques to the application of them in increasingly complex and real-world situations. Identification and estimation (including forecasting) of cash flows, project appraisal formulae, and the application of net present value (NPV), internal rate of return (IRR) and other project evaluation criteria are illustrated with a variety of calculation examples. Risk analysis is extensively covered by the use of risk adjusted discount rate, certainty equivalent, sensitivity, simulation and Monte Carlo analysis. The NPV and IRR models are further applied to forestry, property and international investments. Resource constraints are introduced to the capital budgeting decisions with a variety of worked examples using linear programming technique. All calculations are extensively supported by Excel workbooks on the Web, and each chapter is well reviewed by end of chapter questions.

Written by authors of established texts in this area, this book is a companion volume to the classic The Capital Budgeting Decision. Exploring this key topic in corporate finance the authors examine the complexities of capital budgeting as well as the opportunities to improve the decision process where risk and time are important elements. Containing ‘ Global Aspects ’ sections that cover cross-border decision-making, this book also emphasizes the application of capital budgeting techniques to a variety of issues, including the hugely significant ‘ buy versus lease ’ decision that cost corporations billions each year. It gives in-depth coverage to: real options - the value of a project must take into consideration the flexibility that it provides management, acknowledging the option of making decisions in the future when more information is available decomposing cash flows - a project consists of many series of cash flows and each series deserves its own specific risk-adjusted discount rate. Decomposing the cash flows of an investment highlights the fact that while managers are generally aware that divisions and projects have different risks, too often they neglect the fact that the cash flow components may also have different risks, with severe consequences on the quality of the decision-making. Designed to assist those making business decisions at all levels, this volume is essential reading for all those working in or studying capital budgeting.
