Computer Concepts COURSE ON COMPUTER CONCEPTS MADE SIMPLE.

Centered on problem solving, this volume is designed to build the skills that are essential for a career in information technology. The reference provides a carefully selected set of mathematical tools and prepares readers for programming by providing a set of algorithmic tools and an understanding of basic programming concepts. The reference covers problem solving, exponents, number systems, units analysis, algebra, graphing, computer programming concepts, computer logic and structured program design. For Information Technology professionals.

Computer Concepts Illustrated, Introductory Cengage Learning For use in the Computer Concepts course. This book is also suitable for students and individuals seeking an introduction to computer concepts. The primary goal of the GO! Series, aside from teaching computer applications, is ease of implementation, with an approach that is based on clearly defined projects. Teaching and Learning Experience This program will provide a better teaching and learning

experience—for you and your students. Here's how: Personalize Learning: MyITLab delivers proven results in helping students succeed, provides engaging experiences that personalize learning, and comes from a trusted partner with educational expertise and a deep commitment to helping students and instructors achieve their goals. Engage Students with a Project-Based Approach: GO!'s project-based approach teaches students to solve real problems as they practice and learn the features. Motivate Students with Clear Instruction: Based on professor and student feedback, this text has been designed to offer clear instruction for full student comprehension. Teach the Course You Want in Less Time: The GO! series' one-of-a kind instructional system provides you with everything you need to prepare for class, teach the material, and assess your students.

What Should Teachers Know about Technology Cengage Learning

A core or supplementary text for one-semester, freshman/sophomore-level introductory courses taken by programming majors in Problem Solving

for Programmers, Problem Solving for Applications, any Computer Language Course, or Introduction to Programming. Revised to reflect the most current issues in the programming industry, this widely adopted text emphasizes that problem solving is the same in all computer languages, regardless of syntax. Sprankle and Hubbard use a generic, non-language-specific approach to present the tools and concepts required when using any programming language to develop computer applications. Designed for students with little or no computer experience — but useful to programmers at any level — the text provides step-by-step progression and consistent in-depth coverage of topics, with detailed explanations and many illustrations.

COMPUTER CONCEPTS helps you master computer concepts that are essential for success on the job and in today's digital world. Written by acclaimed author and renowned technology expert Professor Corinne Hoisington, TECHNOLOGY NOW inspires you to use technology most effectively. Hands-on activities let you try new technologies while ethical issues scenarios, critical-thinking activities, and team projects help you increase key skills with interesting challenges. Written in simple language using fun and interesting examples that relate to everyday life, this edition provides today ' s most current technology information in a concise, visual presentation. Key terms are highlighted and clearly defined to ensure comprehension. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Go! All in One Course Technology Ptr Part of our New Perspectives Series, this new edition offers a case-oriented, problem-solving approach for learning the basic to more advanced features of the Internet—from browsing, navigating, and searching on the Internet, to using e-mail, advanced communication tools and other Web topics.

Computer Concepts: Illustrated Brief Cengage Learning The book, in its second edition, precisely

addresses the need of management students to acquaint with the basic concepts of computers, information technology and information system. The book provides readers with information pertaining to database concepts, networking essentials, web concepts and phases of system development life cycle. The business processes such as Enterprise Resource Planning, Customer Relationship Management and in e-Commerce are also introduced in the second edition. Thus the book can be regarded as one-stop compact teaching-reading resource for getting started with topics relevant to development of IT solutions. Key Features

- The text is lecture based, which makes the teaching of the subject easier.
- Comprehensive coverage of all important topics for clear understanding of the subject.
- Chapter-end review questions to help students test their own knowledge of the subject matter.
 - Chapter-end summary for quick recapitulation of concepts before examination or moving to the next chapter.
 - Tables, figures and illustrations enhance concept apprehension.

Fundamentals of Discrete Math for Computer Science Cengage Learning

This is the eBook of the printed book and may not include any media, website access codes, or print supplements that may come packaged

with the bound book. Intended primarily for courses in Computer Concepts and Office Applications, this text also provides practical content to current and aspiring industry professionals. One Book. Everything You Need. GO! All In One, Second Edition teaches computer concepts and applications together — the way it is in the real world! It engages students right away by using a jobs-focused approach that integrates computer concepts and applications into practical combinations of concepts and skills in the context of a job. Because it teaches computer concepts and applications together - the way it is in the real world! ¿ It engages students right away by focusing on jobs and incorporating Web 2.0 apps in a logical way. ¿ ¿ Take a look at GO! All In One and learn how you can put concepts into action through this unique, jobs-focused approach that integrates computer concepts and applications into practical combinations of concepts and skills in the context of a job. With this approach students learn how to work in the real world where they will solve problems using computer concepts and ¿ skills related to the Internet, Microsoft

Office applications, collaboration, social media, and cloud computing. Break through to improved results with MyITLab® MyITLab for GO! All in One is an online homework, tutorial, and assessment program that truly engages students in learning. It helps students better prepare for class, quizzes, and exams – resulting in better performance in the course – and provides educators a dynamic set of tools for gauging individual and class progress. And, MyITLab comes from Pearson, your partner in providing the best digital learning experiences. ¿ This fully integrated learning system includes application Grader projects for Word, Excel and PowerPoint, allowing your students to complete projects in a live application environment and submit their work for immediate grading and detailed feedback. Automated grading provides instant feedback on defined application projects, while open-ended projects encourage exploration and creativity. ¿ Note: MyITLab is not a self-paced technology and should only be purchased when required by an instructor.

Go! All in One Prentice Hall

Most would agree that the acquisition of problem-solving ability is a primary goal of education. The emergence of the new information technologies in the last ten years has raised high expectations with respect to the possibilities of the computer as an instructional tool for enhancing students' problem-solving skills. This volume is the first to assemble, review, and discuss the theoretical, methodological, and developmental knowledge relating to this topical issue in a multidisciplinary confrontation of highly recommended experts in cognitive science, computer science, educational technology, and instructional psychology. Contributors describe the most recent results and the most advanced methodological approaches relating to the application of the computer for encouraging knowledge construction, stimulating higher-order thinking and problem solving, and creating powerful learning environments for pursuing those objectives. The computer applications relate to a variety of content domains and age levels.
