I have physical scars from past surgeries, however, I have emotional scars as well. They were buried deep inside (hidden). It wasn't until my mother died was I able to "catch my breath" and to make sense of or process the emotional pain I had endured due to her prescription drug addiction, resulting in my own addictions. The IL "track"—one of five tracks within VA's VR&E program—provides a range of benefits to help veterans with service-connected disabilities live independently when employment is not considered feasible at the time they enter the VR&E program. These benefits can include counseling, assistive devices, and other services or equipment. GAO was asked to review issues related to the IL track. This report examines (1) the characteristics of veterans in the IL track, and the types and costs of benefits they were provided; (2) the extent to which their IL plans were completed, and the time it took to complete them; and (3) the extent to which the IL track has been administered appropriately and consistently across regional

offices. To conduct this work, GAO analyzed VA administrative data from fiscal years 2008 to 2011, and reviewed a random, generalizable sample of 182 veterans who entered the IL track in fiscal year 2008. In addition, GAO visited five VA regional offices; interviewed agency officials and staff; and reviewed relevant federal laws, regulations, and agency policies and procedures. Of the 9,215 veterans who entered the Department of Veterans Affairs' (VA) Independent Living (IL) track within the Vocational Rehabilitation and Employment (VR&E) program in fiscal years 2008 to 2011, most were male Vietnam era veterans in their 50s or 60s. Almost 60 percent served in the U.S. Army, and fewer than 1 percent served in the National Guard or Reserve. The most prevalent disabilities among these veterans were post-traumatic stress disorder and tinnitus. GAO's review of 182 IL cases from fiscal year 2008 found that VR&E provided a range of IL benefits to veterans. Among these cases, the most common benefits were counseling services and

computers. Less common benefits included gym memberships, camping equipment, and a boat. GAO estimated that VR&E spent nearly \$14 million on benefits for veterans entering the IL track in fiscal year 2008—an average of almost \$6,000 per IL veteran. Most veterans completed their IL plans, which identify their individual goals to live independently and the benefits VR&E will provide. About 89 percent of fiscal year 2008 IL veterans were considered by VR&E to be “rehabilitated,” that is, generally, to have completed their IL plans by the end of fiscal year 2011. VR&E discontinued or closed about 5 percent of cases for various reasons, such as the veteran declined benefits. Six percent of cases were open at the end of fiscal year 2011. Because the complexity of IL cases varied depending on veterans' disabilities and needs, some cases were fairly simple for VR&E to close. For example, one IL case only called for the installation of door levers and a bathtub rail. Another more complex case involved the provision of a range of IL benefits, including home modifications. Rehabilitation rates across regions varied from 0 to 100 percent, and regions with larger IL caseloads generally rehabilitated a greater percentage of IL veterans. While IL plans nationwide were completed in 384 days, on average, completion times varied by region, from 150 to 895 days. VR&E exercises limited oversight to ensure appropriate and consistent administration of the IL track across its regions. While the law currently allows 2,700 veterans to

enter the IL track annually, data used to monitor the cap are based on the number of IL plans developed, not on the number of individual veterans admitted. Veterans can have more than one plan in a fiscal year, so one veteran could be counted multiple times towards the cap. GAO-13-474

Uncover Effective Engineering Solutions to Practical Problems
With its clear

explanation of fundamental principles and emphasis on real world applications, this practical text will motivate readers to learn. The author connects theory and analysis to practical examples drawn from engineering practice. Readers get a better understanding of how they can apply these concepts to develop engineering answers to various problems. By using simple examples that illustrate basic principles and more complex examples representative of engineering applications throughout the text, the author also shows readers how fluid mechanics is relevant to the engineering field. These examples will help them develop problem-solving skills, gain physical insight into the material, learn how and when to use approximations and make assumptions, and understand when these approximations might break down. Key Features of the Text
* The underlying

physical concepts are highlighted rather than focusing on the mathematical equations. * Dimensional reasoning is emphasized as well as the interpretation of the results. * An introduction to engineering in the environment is included to spark reader interest. * Historical references throughout the chapters provide readers with the rich history of fluid mechanics.

Nursing and Informatics for the 21st Century Series is a critical resource in chronicling the huge historical shift in nursing linked to the explosion of EHR national and international strategies and health policies around the globe. Each book in the series examines the revolution that has occurred in nursing and explores the role IT continues to play in this transformation, with

a thoughtful examination of nursing practice, science and research, and education. This book, *Nursing Education and Digital Health Strategies* explores the current state of health and healthcare education, as well as the current state of nursing informatics education. These topics include technologies-enabled education for all nurses and interprofessional collaborations from a worldwide perspective. The "New" learning for applied critical thinking will include technology, content, skills versus tools, and the use of "smart" systems for care delivery, the role of critical thinking and uniqueness of nursing care delivery. Further, how these changes are understood as a paradigm shift that needs to be incorporated along with nursing and healthcare education is emphasized. The effects of technology

on human behavior are also explored, addressing human-factors interaction, interdependence of human computer interaction and other effects of technology on wellbeing. As part of nursing education, learning from clients/patients to better shape and advance nursing education and scholarship are discussed. Academic-clinical practice partnerships for a digital future, how teams are working together (clinician/teacher) for better healthcare delivery and applied knowledge, including joint appointments (exchange of academia and applied expertise), academic-applied human resources, and interprofessional learning/development are discussed. The book closes by discussing and using case studies to showcase nursing competencies for the next decade, and implications for preparing the healthcare workforce for a digital world, faculty readiness and the interaction with gaming and simulations. Nursing informatics education, including continuing education beyond academia, i.e., informal education, worldwide is described as well as global challenges to support digital world capabilities. Hands-on Experiential Delivery (shifting from lecture-based delivery) - case studies learning-based exemplars are included.

 Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies. Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation.
