This book is focused on the social and occupational origins of the founders of modern British industry: what kind of families did they come from? What was their occupation before they set up as industrialists? In discussing these and other issues, this study makes an important contribution to the problem of social mobility during the Industrial Revolution.

This book explores the dynamic interaction between economic life, society and civilisation in the regions around and beyond the Indian Ocean during the period from the rise of Islam to 1750. Within a distinctive theory of comparative history, Professor Chaudhuri analyses how the identity of different Asian civilisations was established. He examines the structural features of food habits, clothing, architectural styles and housing; the different modes of economic production; and the role of

crop raising, pastoral nomadism, and industrial activities for the main regions of the Indian Ocean. In an original and perceptive conclusion, the author demonstrates how Indian Ocean societies were united or separated from one another by a conscious cultural and linguistic identity. However, there was a deeper structure of unities created by a common ecology, technology, technology of economic production, traditions of government, theory of political obligations and rights, and a shared historical experience. His theory enables the author to show that the real Indian Ocean was an area that extended historically from the Red Sea and the Persian Gulf to the sea which lies beyond Japan.

In this innovative book, Stephen P. Rice offers a new understanding of class formation in America during the several decades before the Civil War. This was the period in the nation's early industrial development when travel by steamboat became commonplace, when the railroad altered concepts of space and time, and when Americans experienced the

beginnings of factory production. These disorienting changes raised a host of questions about what machinery would accomplish. Would it promote equality or widen the distance between rich and poor? Among the most contentious questions were those focusing on the social consequences of mechanization: while machine enthusiasts touted the extent to which machines would free workers from toil, others pointed out that people needed to tend machines, and that that work was fundamentally degrading and exploitative. *Minding the Machine* shows how members of a new middle class laid claim to their social authority and minimized the potential for class conflict by playing out class relations on less contested social and technical terrains. As they did so, they defined relations between shopowners—and the overseers, foremen, or managers they employed—and wage workers as analogous to relations between head and hand, between mind and body, and between human and machine. Rice presents fascinating discussions of the mechanics' institute movement, the manual labor school movement, popular physiology reformers, and efforts to solve the seemingly intractable problem of steam boiler explosions. His eloquent narrative demonstrates that class is as much about the comprehension of social relations as it is about the making of social relations, and that class formation needs to be understood not only as a social struggle but as a conceptual struggle.

This handbook presents an authoritative account of the development of movements, thoughts and policies of OBCs (Other Backward Classes) in India. Despite the adoption of egalitarian principles in the Indian Constitution, caste inequalities, discrimination and exclusionary practices against people from backward classes and other lower castes continue to haunt them in contemporary India. A comprehensive work on the politics of identity and plurality of experiences of OBCs in India, this handbook: — Features in-depth research by eminent scholars on the Other Backward Classes (OBC) social and political thought, OBC movements and OBC development and policy making. — Discusses the life, ideologies and pioneering contributions by Gautam Buddha, Sant Kabir, Jotirao Phule,

Savitribai Phule, Shahu Maharaj, Narayana Guru, B.R. Ambedkar, Ram Manohar Lohia, and E V Ramasamy Periyar and leading social reform movements. — Examines OBC issues with case studies from various Indian states to look at issues of pre- and post- Mandal India; backward caste movements; and reclamation of the Bahujan legacy. — Critiques public policies and programs for the development of OBCs in India. — Reviews the status of Muslim OBCs in India and of the invisibilized nomadic communities. — Reviews the impact of globalization on the economically backward lower castes and the impact of development initiatives for the excluded people. The first of its kind, this handbook will be essential reading for scholars and researchers of exclusion and discrimination studies, diversity and inclusion studies, Global South studies, affirmative action, sociology, Indian political history, Dalit studies, political sociology, public policy, development studies and political studies.

Industry in Britain Cambridge University Press

My Apprenticeship has long been cited as an important and fascinating source for students of social attitudes and conditions in late Victorian Britain, and this new paperback edition makes it once more generally available. Beatrice Webb, the eighth of the nine daughters of the railway magnate Richard Potter, was an exceptionally able person, with a zest for observation, a knack for pointed comment, and a habit of self-examination - all of which gifts she put to good account in the private diary she kept all her life and in this brilliant volume of autobiography which she based on that diary. It tells the story of a craft and a creed, of a withdrawn but talented girl, growing up in a prosperous household, who turned to social investigation and social reform, moving between the two starkly contrasted worlds of West End smart society and East End squalor. She served a hard apprenticeship, as a woman as well as a professional worker, and in a new introduction to this edition Norman MacKenzie describes the severe personal stresses which lay behind her life of dedication to social improvement, particularly her frustrated passion for Joseph Chamberlain and the troubled courtship which preceded her marriage to Sidney Webb. This volume ends on the eve of that marriage, when she was about to begin her famous and astonishingly productive collaboration with her husband. As historians, publicists and Fabian politicians the Webbs were pioneers of the modern age. The ensuing volume, which chronicles their mature career and was appropriately titled *Our Partnership*, is also published by the Cambridge University Press in collaboration with the London School of Economics and Political Science.

Education for the Future: The Case for Radical Change focuses on the developments in educational systems and the role of teachers and learning institutions in shaping society. The book first ponders on the problems confronting progress in education, including the pressure on schools and teachers to perform according to the dictates of society. The need to develop curriculum in universities that can instill efficient learning for students is also underscored. The text also takes a look at the relationship of literary culture and the productive and distributive activities of the market place. The manuscript focuses on the influence of educational technology in the provision of aids in learning. The text also underscores that the solution to the problems of education in Britain should not be taken individually, but rather it should be treated as part of a larger pattern. The controversy in the establishment of the Gresham College is noted. The book is a dependable reference for readers interested in studying the development, issues, and trends in the educational system of Great Britain.
