Environmental remediation has brought significant improvements to industrial sites and surrounding communities throughout the nation. It's also become notorious for high budget overruns and frequent schedule delays, as environmental remediation's technological aspects become subject to political, managerial and economic concerns. Modern Project Management (MPM) Processes offer a new framework for remediation programs, geared to increased efficiency and precise troubleshooting. Environmental consultant and certified project management professional (PMP) Timothy J. Havranek has helped various companies put MPM into practice: now, he brings his techniques to the

environmental remediation industry at large. Melding traditional project management structure and advanced strategic planning techniques to the needs of environmental remediation, Modern Project Management Techniques for the Environmental Remediation Industry presents this major innovation: a standardized planning process, applicable to all types of remediation projects. Every participant in an environmental remediation effort can mutually benefit from Modern Project Management Techniques for the Environmental Remediation Industry. Environmental consultants will discover precise budget and schedule-planning skills-quite an advantage in their increasingly competitive industry. Customers will also know what to consider when selecting an environmental services company, and discover advanced methods for reducing project costs and durations. MPM: it's bringing new vitality and purpose to environmental protection. Put it into practice with the benefit of Havranek's real-life experience.

Don't let your creative ideas get picked apart and put down! If you're like most creative people, chances are high that you've had your share of ideas rejected by clients or decision makers. While we sometimes make the mistake of believing ideas should sell themselves, the fact is that the better and bolder the idea, the more it needs selling. This book contains powerful techniques to help you sell your ideas to those with approval power. You'll find tips from designers, writers, marketers and other creative professionals, along with meaty advice from selling and branding gurus. In no time, you'll be able to convince those who hold the purse strings that your ideas are worth pursuing and investing in.

This book emphasizes that by the year 2009, the impact of climate change will be noticed by all and that a possible global crisis may develop perhaps no

later than 2025. It explains that since global warming is man-made, humanity has no choice but to adjust its lifestyle, reduce its ecological footprint, and also restore the ecology in order to avoid possible catastrophic climate change. Companies will have to play an important role in resolving this situation and may need to review their direction; if need be, companies may have to take the lead and act without the support of their respective governments. While organizations may in some cases already have taken a leading role, there is not yet sufficient action taking place to combat climate change. While the information in this book contains a brief overview of the possible events for the next twenty years, it also holds the key which is needed to change human consciousness directly addressing the main aspects of human consciousness that are the cause of many planetary imbalances. The author decided to publish this material, which she received late 2004, because of a looming planetary crisis. Some of the timelines predicted in the book are now beginning to emerge. Many organizations can play a major role in making changes to support the environment and can in the end perhaps more so than governments create the solution to an enormous global problem. Those in leading positions can be a step ahead. It may be in their interest to do so to be competitive as part of a new, ecologically more aware future. There is a trend

in business whereby people are proactively looking for humanity. The book provides examples of care (or solutions; while there may be technical solutions available for some aspects of this emerging crisis, innovation is required to implement solutions back into the production process and into society. Within each person already resides a unique, very creative and innovative part that may be of assistance. Each person has access to this innovative part within which has answers and solutions to any situation in life. This innate part is often able to express itself in people with very good creative ability or people with a special gift and is available to everyone who wishes to find it. In this book an example is shown of how this creative and innovative part could become a resource for business. This part is sometimes called the true self, your authenticity, or your own innate uniqueness. For those who wish to explore this part, a method which is briefly outlined in this book, may be beneficial. This unique method, called exchange of awareness, utilizes the persons self through a process that may be of assistance. It includes an example of how to apply this method in personal relationships and in the workplace environment, such as when staff members are not in alignment with a companys general objectives. The true self or innate uniqueness knows what is required in any situation and may be of help by providing further insights. More care and caring procedures are needed to be applied by

lack thereof) in the context of both business and personal relationships. It shows where care is often lacking in a business process, such as sales. It includes some sample conceptual ideas about implementation of care. These care concepts, which are a major issue, are often absent in todays society and need to be implemented in any organizational structure, such as a business, hospital, or educational facility to improve functionality and outflow. Through implementation of care principles, there may be an improvement in the outflow of people and the structures they take part in with benefits for all of life and society at large.

This book requires an interdisciplinary understanding of creativity, ideal for the formation of a digital public culture. Educating students, young professionals and future engineers is to develop their capacity for creativity. Can creativity be learned? With this question, the relations of technology and art appear in a new light. Especially the notion of "progress" takes on a new meaning and must be distinguished from innovation.

The discussion of particular educational approaches, the exploration of digital technologies and the presentation of best practice examples conclude the book. University teachers show how the teaching of creativity reinforces the teaching of other subjects, especially foreign languages.

Organizations that prioritize environmental, health, and safety (EHS) issues are well placed to attract better customers, better talent, and today's growing number of socially responsible investors. But, to gain these benefits, companies must choose the right sustainability strategies, and then manage and measure them well. Now, leading business sustainability consultant Peter Soyka offers a complete and actionable guide to driving greater value

through sustainability. In *Creating a Sustainable Organization*, Soyka bridges the disparate worlds of the EHS/sustainability professional and the investor/analyst. Readers will learn what the evidence says about linkages between sustainability and value... how to manage key stakeholder relationships influencing corporate response to EHS and social equity issues... how to effectively manage sustainability throughout the business... how to evaluate sustainability posture and performance from the standpoint of external investors and internal management... how to maximize the influence of organizational actors focused on sustainability, and much more. This book will be invaluable for all environmental, health, and safety decision-makers and professionals concerned with improving sustainability and value; for executives and strategists seeking long-term competitive advantage; for stock analysts evaluating potential investments; and for researchers and MBA candidates currently studying the techniques and potential of corporate sustainability.
