A former student once wrote to Dave Winans, "Thanks for understanding that we're kids and yet not treating us like we are." With that sentiment in mind, Winans wrote Moondog Verse or what he refers to as one independent school teacher's manifesto and manual for teaching creative writing to middle schoolers. While offering advice on how to approach and treat students with respect, Moondog Verse provides lessons and exercises for creative writing assignments as well as thoughts and observations on how to excite young people

about the writing process. Emphasizing the use of good models, relevant topics, and personal experience as resource, Moondog Verse encourages teachers to set high standards while allowing students the opportunity to express their ideas and feelings about themselves and the world around them.

The Creative Engineering Design Assessment or CEDA is a newly developed tool to assess creativity specific to engineering design which is vital for innovation. The revised CEDA assesses usefulness in addition to originality. Both originality and usefulness are key constructs in creativity but are primarily essential and emphasized ever

more in engineering design. Since the preliminary research was presented to the National Science Foundation, further reliability and validity has been developed and established. The CEDA is different from other general creativity measures as it demonstrates discriminant validity with the Creative Personality Scale, Creative Temperament Scale, and the Cognitive Risk Tolerance Scale, and has demonstrated convergent validity with the Purdue Creativity Test and the Purdue Spatial Visualization Test- Rotations. It focuses on engineering specific measures, measuring engineering creativity and spatial skills. The aim of this book is to disseminate the CEDA tool for use in engineering educational programs, industry, NASA and the military. *Creative Engineering Design Assessment (CEDA) Background, Directions, Manual, Scoring Guide and Uses* discusses and outlines the need for creativity in our global economy and in engineering design and provides the CEDA tool in effort to achieve this.

You are creative. No doubt about it. But you are not aware of it. Your creative potentials are dormant, waiting to be aroused from deep slumber. This book aims just at that objective by answering an array of questions like: What is creativity? Why is it dormant? How to unlock it? How do we define a problem? How to find a useful solution to a problem? And so on. All that it requires to answer such questions is: DESIRE and WILL. We have a much greater thinking capacity than we ever use. While unfolding this truth, this book reveals the strategies to remove roadblocks and negativity that stunts the growth of the imaginative faculty. After getting the feel of release, discussions lead to ways and means of developing creativity, i.e. unique ability to solve problems in an innovative way. Efforts are also made to convince the

readers that creativity can be applied each day to many aspects of our everyday life by following the leads. If you desire to ignite the latent spark in your mind, and cherish to be creative, this book is for you.
