Handbook of Race-Ethnicity and Gender in Psychology Graphic Communications Group

Multicultural aspects of psychology have received some attention in the literature in the last decade. A number of texts currently address these significant concerns, for example, *Counseling the Culturally Different* (Sue & Sue, 2008); *Handbook of Multicultural Counseling* (Potter et al., 2009); and *Handbook of Multicultural Counseling Competencies* (Pope-Davis & Coleman, 2005). In their most recent editions, several of these books address more nuanced complexities of diversity, for example, the intersections of gender or social class with race-ethnicity. Meanwhile, other texts have addressed gender issues in psychology (*Handbook of Counseling Women, Counseling Men*), with some attention paid to racial-ethnic and other diversity concerns. Clearly the progression of scholarship in this field reflects the importance of incorporating multiple aspects of diversity within psychology. However, no book currently exists that fully addresses the complexities of race-ethnicity and gender together. Better understanding of the dual impact of race-ethnicity and gender on psychological functioning may lead to more effective conceptualizations of a number of mental health issues, such as domestic violence, addictions, health-related behaviors and achievement. Exploring the impact of race-ethnicity and gender also may provide a broader understanding of self-in-community, as this affects individuals, families and other social groups and work and career development. Topics of interest may include identity development, worldviews and belief systems, parenting styles, interventions for promoting resilience and persistence and strategies for enhancing more accurate diagnostic and treatment modalities. Today's world is comprised of multiple and intersecting communities that remain in need of psychological models and interventions that support and promote both individual and collective mental health. We believe that utilizing unidimensional conceptual models (e.g. focusing solely on race-ethnicity or gender) no longer adequately addresses psychological concerns that are dynamic, complex and multifaceted. The proposed Handbook will focus on timely topics which historically have been under-addressed for a number of diverse populations.

The ASC Division on Corrections & Sentencing Handbook Series will publish volumes on topics ranging from violence risk assessment to specialty courts for drug users, veterans, or the mentally ill. Each thematic volume focuses on a single topical issue that intersects with corrections and sentencing research. SNI Univ of California Press

The Handbook of Social Status Correlates summarizes findings from nearly 4000 studies on traits associated with variations in socioeconomic status. Much of the information is presented in roughly 300 tables, each one providing a visual snapshot of what research has indicated regarding how a specific human trait appears to be correlated with socioeconomic status. The social status measures utilized and the countries in which each study was conducted are also identified. **QUESTIONS ADDRESSED INCLUDE THE FOLLOWING:** Are personality traits such as extraversion, competitiveness, and risk-taking associated with social status? How universal are sex differences in income and other forms of social status? What is the association between health and social status? How much does the answer vary according to specific diseases? How well established are the relationships between intelligence and social status? Is religiosity associated with social status, or does the answer depend on which religion is being considered? Are physiological factors correlated with social status, even factors involving the brain? Finally, are there as yet any "universal correlates of social status"?

Over the past two centuries, many aspects of criminal behavior have been investigated. Finding this information and making sense of it all is difficult when many studies would appear to offer contradictory findings. *The Handbook of Crime Correlates* collects in one source the summary analysis of crime research worldwide. It provides over 400 tables that divide crime research into nine broad categories: Pervasiveness and intra-offending relationships Demographic factors Ecological and macroeconomic factors Family and peer factors Institutional factors Behavioral and personality factors Cognitive factors Biological factors Crime victimization and fear of crime Within these broad categories, tables identify regions of the world and how separate variables are or are not positively or negatively associated with criminal behavior. Criminal behavior is broken down into separate offending categories of violent crime, property crime, drug offenses, sex offenses, delinquency, general and adult offenses, and recidivism. Accompanying each table is a description of what each table indicates in terms of the positive or negative association of specific variables with specific types of crime by region. This book should serve as a valuable resource for criminal justice personnel and academics in the social and life sciences interested in criminal behavior.

Volume I of *The Official History of Criminal Justice in England and Wales* frames what was known about crime and criminal justice in the 1960s, before describing the liberalising legislation of the decade. Commissioned by the Cabinet Office and using interviews, British Government records, and papers housed in private, and institutional collections, this is the first of a collaboratively written series of official histories that analyse the evolution of criminal justice between 1959 and 1997. It opens with an account of the inception of the series, before describing what was known about crime and criminal justice at the time. It then outlines the genesis of three key criminal justice Acts that not only redefined the relations between the State and citizen, but also shaped what some believed to be the spirit of the age: the abolition of capital punishment, and the reform of the laws on abortion, and homosexuality. The Acts were taken to be so contentious morally and politically that Governments of different stripes were hesitant about promoting them formally. The onus was instead passed to backbenchers, who were supported by interlocking groups of reformers, with a pooled knowledge about how to effectively organise a rhetoric that drew on the language of utilitarianism, and the clarity and authority of a Church of England. This came to play an increasingly consequential and largely unacknowledged part in resolving what were often confusing moral questions. This book will be of much interest to students of criminology and British history, politics and law.
