Volume I of The Official History of Criminal Justice in England and Wales frames what was known about crime and criminal justice in the 1960s, before describing the liberalising legislation of the decade. Commissioned by the Cabinet Office and using interviews, British Government records, and papers housed in private, and institutional collections, this is the first of a collaboratively written series of official histories that analyse the evolution of criminal justice between 1959 and 1997. It opens with an account of the inception of the series, before describing what was known about crime and criminal justice at the time. It then outlines the genesis of three key criminal justice Acts that not only redefined the relations between the State and citizen, but also shaped what some believed to be the spirit of the age: the abolition of capital punishment, and the reform of the laws on abortion, and homosexuality. The Acts were taken to be so contentious morally and politically that Governments of different stripes were hesitant about promoting them formally. The onus was instead passed to backbenchers, who were supported by interlocking groups of reformers, with a pooled knowledge about how to effectively organise a rhetoric that drew on the language of utilitarianism, and the clarity and authority of a Church of England. This came to play an increasingly consequential and largely unacknowledged part in resolving what were often confusing moral questions. This book will be of much interest to students of criminology and British history, politics and law.

Surveys administered to high school students, studies carried out on jail and prison inmates, and interviews conducted with substance abusers undergoing treatment all point to the same conclusion: drugs and crime are strongly connected. Why they are connected is less well understood, however. Written for middle to upper-level undergraduate courses on drugs and crime or substance abuse and crime, this book examines the drug-crime connection in a systematic and comprehensive way. This book covers the entire drug-crime spectrum, starting with a review of drug and crime terminology, classification and theory, and ending with policy implications for prevention, harm reduction, and macro-level management of the drug-crime problem. The opening chapters discuss drugs and crime separately for the purpose of setting the stage for later discussions on drug-crime relationships. As the book proceeds, the boundaries between drugs and crime blur, thus revealing the complex and intimate relationship that links these two behaviors.

In the fourth edition of Essential Criminology, authors Mark M. Lanier, Stuart Henry, and Desire .M. Anastasia build upon this best-selling critical review of criminology, which has become essential reading for students of criminology in the 21st century. Designed as an alternative to overly comprehensive, lengthy, and expensive introductory texts, Essential Criminology is, as its title implies, a concise overview of the field. The book guides students through the various definitions of crime and the different ways crime is measured. It then covers the major theories of crime, from individual-level, classical, and rational choice to biological, psychological, social learning, social control, and interactionist perspectives. In this latest edition, the authors explore the kind of criminology that is needed for the globally interdependent twenty-first century. With cutting-edge updates, illustrative real-world examples, and new study tools for students, this text is a necessity for both undergraduate and graduate courses in criminology.

Rural crime has long been overlooked in the field of crime prevention. Sustained academic interrogation is necessary, therefore, to reduce the extensive economic and social costs of rural crime as well as to challenge some of the myths regarding the prevention of rural crime. Rural Crime Prevention: Theory, Tactics and Techniques critically analyses, challenges, considers and assesses a suite of crime prevention initiatives across an array of international contexts. This book recognises the diversity and distinct features of rural places and the ways that these elements impact on rates, experiences and responses. Crucially, Rural Crime Prevention also incorporates non-academic voices which are embedded throughout the book, linking theory and scholarship with practice. Proactive responses to rural offending based on sound evidence can serve to facilitate feelings of safety and security throughout communities, enhance individual wellbeing and alleviate pressure on the overburdened and typically under-resourced formal elements of the criminal justice system. This book provides an opportunity to focus on the prevention of crime in regional, rural and remote parts of the globe. An accessible and compelling read, this book will appeal to students and scholars of criminology, policing, sociology and practitioners interested in learning about the best-practice international approaches to rural crime prevention in the twenty-first century.

The Handbook of Social Status Correlates summarizes findings from nearly 4000 studies on traits associated with variations in socioeconomic status. Much of the information is presented in roughly 300 tables, each one providing a visual snapshot of what research has indicated regarding how a specific human trait appears to be correlated with socioeconomic status. The social status measures utilized and the countries in which each study was conducted are also identified. QUESTIONS ADDRESSED INCLUDE THE FOLLOWING: Are personality traits such as extraversion, competitiveness, and risk-taking associated with social status? How universal are sex differences in income and other forms of social status? What is the association between health and social status? How much does the answer vary according to specific diseases? How well established are the relationships between intelligence and social status? Is religiosity associated with social status, or does the answer depend on which religion is being considered? Are physiological factors correlated with social status, even factors involving the brain? Finally, are there as yet any "universal correlates of social status"?
