Identify and analyze the critical path The basic concept behind the analysis of critical path is that you can only move on to certain tasks after you've finished the others. You must accomplish the tasks in the proper sequence so that each stage gets completed before you can start on the subsequent stage.

Consider the first node, Node A. Here $LS = 7$ and $ES = 1$, therefore total float of Node A = $7 - 1 = 6$. On critical path $LS = ES$ and $LF = EF$ hence total float is equal to zero. Once backward pass and total

float calculation is complete the resultant network diagram will look as follows.

Starting with the critical path, the Early Start (ES) of the first activity is one. The Early Finish (EF) of an activity is its ES plus its duration minus one. Using our earlier example, Activity 2 is the first activity on the critical path: $ES = 1$, $EF = 1 + 5 - 1 = 5$.

For example, when you ' re making an omelet, " Heating the pan " has zero float since it is on the critical path. Seasoning the eggs, however, has a lot of float. You can add salt to the raw egg mixture, while the eggs are cooking, and even after they ' ve cooked.
