A Rhetoric for Theological and Biblical Writers University of Toronto Press
This volume provides an informed view of how information technology is shaping the contemporary humanities. It specifically reflects five ideals:
*humanities scholars with all levels of access are doing important work with technology;
*humanities scholars' projects with technology reflect significant diversity, both across and within disciplinary bounds;
*using information technology in the humanities is a continuous conversation;
*information technology offers new options for humanities education; and
*just as collaboration changes the nature of any project, so does information technology change the nature of collaboration--its speed, character, methods, and possible implementations.
The first to explore new and important ways for humanities scholars to collaborate across disciplines via electronic media, this book redefines electronic collaboration; presents insightful models of student collaboration; provides important models of faculty collaboration with special emphasis on professional development; and offers a look at the future of electronic collaboration and the overall future of the humanities. Featuring the voices of humanities teacher-scholars at all stages of their professional careers, the chapters emphasize pedagogy, outlining contemporary issues and options. Electronic Collaboration in the Humanities speaks directly to anyone involved with interdisciplinary initiatives in colleges and universities, such as writing across the curriculum and communication across the curriculum programs, and to specific populations within the humanities, including literacy and technology, language and literature, literacy studies, professional writing, and English education.

THE "I HATE TO WRITE" GUIDE TO COLLEGE LEVEL ESSAYS: 4 IN 1 does not replace the required

text books in English
Composition courses but it does explain how to write an essay at this level without using academic words like "thesis." I never understood what that meant when I was an undergraduate, so I don't expected everyone to know what it means...but I do explain what it is in "regular" language. The four volumes grouped together here have appeared in e-book form but never as a print copy. It was probably past time to offer another option. The reason I wrote BASIC ESSAY, BOOK CRITIQUE, and RESEARCH PAPER is that they were the first essays students were required to wrote -- not just in composition class but in other courses. CHOOSING A TOPIC is something that has boggled many a mind. These are my guidelines and enough students told me that the way I detailed essay requirements finally allowed the light bulb moment of understanding the process be lit for them. Hopefully you'll find something helpful, too.

A Critique of Calvinism World Scientific Publishing Company

Bl. John Henry Newman wrote this pair of essays at a time when historical-critical biblical research was beginning to exert its powerful influence on Scriptural studies. He presents his position on what the Councils of Trent and Vatican I require all Catholics to believe about Scripture, and explores areas where he sees room for Catholics to differ in their viewpoints. Faced with the problem of the apparently limited scope of inspiration to "matters of faith and morals" Newman shows how teachings on faith and morals pervade the whole of Scripture, taking in account historical statements and incidental remarks by the Bible's human writers. Newman's essays, which contributed to the theological grounding on which the teachings of Vatican II and the modern Magisterium stand, are essential reading for anyone seeking a deeper understanding of the Scriptural doctrine of the Church, and to engage faithfully and

fruitfully with modern methods of Biblical criticism.

What does it really mean for students to be college and career ready? In this new edition of *Teaching Students to Dig Deeper*, Ben Johnson identifies the ten attributes students need for success, according to key research, the College Board, the ACT, and rigorous state standards. In order to thrive beyond high school, students must become... • Analytical

thinkers • Critical thinkers • Problem solvers • Inquisitive • Opportunistic • Flexible • Open-minded • Teachable • Risk takers • Expressive But how? Johnson offers the answers, providing practical strategies and techniques for making the ten attributes come alive in the classroom, no matter what grade level or subject area you teach. With the book's strategies and tools, you will be inspired, armed, and ready to help all of your students think on a deeper level and expand their learning.

Fourth Edition Longman Publishing Group In its creative integration of the disciplines of writing, rhetoric, and theology, *Writing Theology Well* provides a standard text for theological educators engaged in the teaching and mentoring of writing across the theological curriculum. As a theological rhetoric, it will also encourage excellence in theological writing in the public domain by helping to equip students for their wider vocations as writers, preachers, and communicators in a variety of ministerial and professional contexts. *Critiquing Nursing Research 2nd Edition* John Wiley & Sons

This is the first complete English translation of Pavel Florensky's original and ambitious attempt to arrive at a geometric representation of imaginary numbers, in a context that had already captured the attention of other mathematicians, including Gauss, Argan, Cauchy and Bellavitis. Florensky did not limit his attempt solely to complex projective geometry, but extended it to encompass Ptolemaic-Dantean cosmology and Einstein's Principle of Relativity, as well as a new

epistemological theory. The resulting treatise combines various disciplines and explores the relationship between an immanent realm of knowledge and a transcendent one. *Being a Scientist* First Avenue Editions The Yellow Wallpaper The Floating Press [Suggestions to Medical Authors and A.M.A. Style Book](#) American Psychological Association (APA)

On the Inspiration of Scripture Harper Collins Contributions to this volume summarize and discuss the theoretical foundations of the Collaborative Research Centre at Leipzig University which address the relationship between processes of (re-)spatialization on the one hand and the establishment and characteristics of spatial formats on the other hand. Under the global condition spatial formats are products of collective negotiations on the most effective and widely acceptable balance between the claim for sovereignty and the need for interconnectedness.

The Wilted Tulip GENERAL PRESS *How to Critique Journal Articles in the Social Sciences*, by Scott R. Harris, is a brief, introductory book that provides readers with a step-by-step guide to reading and understanding a social science research article. The author demonstrates the many strengths of social research, including its advantages over ordinary ways of knowing things, and, at the same time, points out that research is inevitably flawed. Rather than naively assuming that good research simply produces "The Truth" or cynically asserting that research is hopelessly biased and futile, this book instills in readers a critical perspective—one that appreciates the strengths and weaknesses of any piece of scholarship.

A Rhetoric for Theological and Biblical Writers Penguin *Being a Scientist* is a comprehensive introduction to the many aspects of scientific life beyond the classroom and laboratory. Written with undergraduate science majors in mind, the book covers ethics, the philosophical bases of scientific methods, library research, reading, peer review, creativity, proposal and paper writing, and oral and poster presentations. In contrast to other texts in the field, which often take a simple prescriptive approach to these topics, *Being a Scientist* connects them to the historical and philosophical roots of modern science, as well as the common experiences of all people. Written in a conversational style, the book makes use of metaphor, historical anecdote, and hypothetical research about everyday household questions. This approach helps undergraduates learn basic research skills

without being too intimidated by the advanced concepts, vocabulary, and methods which are encountered in looking at the current scientific literature. *Being a Scientist* is a textbook for a semester-long course devoted to teaching research and communication skills to undergraduate science majors, but it can be adapted for use in summer research experiences, capstone research courses, and other courses throughout the undergraduate curriculum.

A Manual for Writers of Dissertations Modern Language Assn of Amer Voted America's Best-Loved Novel in PBS's *The Great American Read* Harper Lee's Pulitzer Prize-winning masterwork of honor and injustice in the deep South—and the heroism of one man in the face of blind and violent hatred One of the most cherished stories of all time, *To Kill a Mockingbird* has been translated into more than forty languages, sold more than forty million copies worldwide, served as the basis for an enormously popular motion picture, and was voted one of the best novels of the twentieth century by librarians across the country. A gripping, heart-wrenching, and wholly remarkable tale of coming-of-age in a South poisoned by virulent prejudice, it views a world of great beauty and savage inequities through the eyes of a young girl, as her father—a crusading local lawyer—risks everything to defend a black man unjustly accused of a terrible crime.

Writing Theology Well 2nd Edition CreateSpace Cristian Vega has a talent very few people know about: he's a musician. And he's quite good. The problem he faces is that he has no confidence in himself and is overly concerned about what others think of him, and this fear of rejection has turned Cristian into an introvert. The day after his nineteenth birthday, Cristian receives a call from his girlfriend who tells him that she's met someone else. Confining himself to his bedroom, Cristian has become an emotional wreck and vows to never allow himself to fall in love again. After calling his cousin in an attempt to get his mind off of his ex-girlfriend, Cristian sets in motion a chain of events that will change his life forever. And it all begins with the meeting

of a girl... Emma Turner is quite sick of dating the same kind of man-tall, clean-cut and handsome-and every guy she meets seems more interested in trying to impress her than they are in learning anything about her. When Cristian Vega begins attending the same church as her, she finds herself inexplicably drawn to him. None of her friends understands her attraction to Cristian and they are sure to tell her that every chance they get. Emma's problem isn't in getting her friends to accept Cristian, her bigger issue is in getting Cristian to admit his feelings to her before the successes of being a musician tears them apart. THE PATH tells the story of overcoming one's fear of rejection in order to pursue one's dream regardless of what may come.

Given the explosion of information and knowledge in the field of Life Sciences, adapting primary literature as materials in course work as part of active learning seems to be more effective in improving scientific literacy among science undergraduates than the pure transmission of content knowledge using traditional textbooks. In addition, students also read research articles as part of undertaking laboratory research projects useful for preparing them for graduate school. As such, a good grasp of reading and analytical skills is needed for students to understand how their research project contributes to the field that they are working in. Such skills are being taught at UK and USA universities. In Asia, this approach in teaching has not yet been as widespread, although similar ideas are beginning to be used in education. Written as a quick guide for undergraduate students and faculty members dealing with scientific research articles as part of a module or research project, this book will be useful,

especially in Asia, for students and faculty members as the universities look to incorporating the use of scientific research articles in their undergraduate teaching. For Life Science students, the first time they encounter a primary literature can be rather daunting, though with proper guidance, they can overcome the initial difficulties and become confident in dealing with scientific articles. This guidebook provides a structured approach to reading a research article, guiding the reader step-by-step through each section, with tips on how to look out for key points and how to evaluate each section. Overall, by helping undergraduate students to overcome their anxieties in reading scientific literature, the book will enable the students to appreciate better the process of scientific investigations and how knowledge is derived in science.
