one of the earliest consulting scientific  
detectives, specializing in forensic  
investigations. He was integral in the  
development of techniques, instruments, and  
facilities for scientific criminology. In Crime's

Global competition has caused fundamental  
changes in the competitive environment of the  
manufacturing and service industries. Firms should  
develop strategic objectives that, upon  
achievement, result in a competitive advantage in  
the market place. The forces of globalization on  
one hand and rapidly growing marketing  
opportunities overseas, especially in emerging  
economies on the other, have led to the expansion  
of operations on a global scale. The book aims to  
cover the main topics characterizing operations  
management including both strategic issues and  
practical applications. A global environmental  
business including both manufacturing and  
services is analyzed. The book contains original  
research and application chapters from different  
perspectives. It is enriched through the analyses of  
case studies.

Year 1620 Springer Science & Business Media  
New York City's Broadway district is by far the  
most prestigious and lucrative venue for American  
performers, playwrights, entertainers and  
technicians. While there are many reference works  
and critical studies of selected Broadway plays or  
musicals and even more works about the highlights  
of the American theater, this is the first single-  
volume book to cover all of the activities on  
Broadway between 1919 and 2007. More than  
14,000 productions are briefly described, including  
hundreds of plays, musicals, revivals, and specialty  
programs. Entries include famous and forgotten  
works, designed to give a complete picture of  
Broadway's history and development, its  
evolution since the early twentieth century, and its  
rise to unparalleled prominence in the world of  
American theater. The productions are identified in  
terms of plot, cast, personnel, critical reaction, and  
significance in the history of New York theater and  
culture. In addition to a chronological list of all  
Broadway productions between 1919 and 2007,  
the book also includes approximately 600  
important productions performed on Broadway  
before 1919.

Sperm DNA damage is common and has been associated with reduced rates of conception, impaired embryonic development and increased risk of miscarriage. Although the exact causes of sperm DNA damage are unknown, it is clear that infertile men possess substantially higher levels of sperm DNA damage than do fertile men. Written by leading, internationally renowned clinicians and basic scientists with expertise in sperm DNA, *Sperm Chromatin: Biological and Clinical Applications in Male Infertility and Assisted Reproduction* provides readers with a thoughtful and comprehensive review of the biological and clinical significance of sperm DNA damage. The work covers the fundamental principles of sperm chromatin architecture and function, the proposed modes of DNA damage and repair, the tests of sperm DNA damage, the clinical aspects of DNA damage and the impact of DNA damage on reproductive outcome. Unlike any other title on the topic, *Sperm Chromatin: Biological and Clinical Applications in Male Infertility*

and Assisted Reproduction is an invaluable addition to the literature and will serve as an indispensable resource for basic scientists with an interest in sperm biology and for urologists, gynecologists, reproductive endocrinologists, and embryologists working in the field of infertility.  
**Multiple Stressors: A Challenge for the Future** The Lawbook Exchange, Ltd.  
From the author of *Last Horizons*, Peter Hathaway Capstick now presents *Death in a Lonely Land*, a second volume of his hunting, fishing, and shooting adventures on five continents—stories collected from such magazines as *Outdoor Life*, *NRA's American Hunter*, *Guns & Ammo*, and *Petersen's Hunting*. The stockbroker-turned-outdoorsman recalls his days as an African pro hunter in "The Killer Baboons of Vlackfontein." "Four Fangs in a Treetop" records a foray into British Honduras for the jaguar, "a gold-dappled teardrop of motion." Capstick narrowly escapes the Yellow Beard, Central America's deadly tree-climbing snake, and cows "The Black Death" (Cape buffalo) in the kind of article that makes this author "the guru of American hunting fans" (New

York Newsday). On Brazil's forsaken Marajo Island, he bags the pugnacious red buffalo, which has the "temperament of a constipated Sumo wrestler and the tenacity of an IRS man." The author discusses 12- and 20-gauge shotgun loads; recalls the pleasures of "biltong" (African beef jerky); describes the irresistible homemade lures of snook fishing expert John Gorbach; and kills a genteel take of Atlantic salmon with the brilliantly simple tube fly. Featuring more than thirty gorgeous drawings by famous wildlife artist Dino Paravano, *Death in a Lonely Land* is another collector's item by a writer who "keeps the tradition of great safari adventure alive in each of his books" (*African Expedition Gazette*).

The book gives a comprehensive and lucid account of the science of the atmospheric boundary layer (ABL). There is an emphasis on the application of the ABL to numerical modelling of the climate. The book comprises nine chapters, several appendices (data tables, information sources, physical constants) and an extensive reference list. Chapter 1 serves as an introduction, with chapters 2 and 3 dealing

with the development of mean and turbulence equations, and the many scaling laws and theories that are the cornerstone of any serious ABL treatment. Modelling of the ABL is crucially dependent for its realism on the surface boundary conditions, and chapters 4 and 5 deal with aerodynamic and energy considerations, with attention to both dry and wet land surfaces and sea. The structure of the clear-sky, thermally stratified ABL is treated in chapter 6, including the convective and stable cases over homogeneous land, the marine ABL and the internal boundary layer at the coastline. Chapter 7 then extends the discussion to the cloudy ABL. This is seen as particularly relevant, since the extensive stratocumulus regions over the subtropical oceans and stratus regions over the Arctic are now identified as key players in the climate system. Finally, chapters 8 and 9 bring much of the book's material together in a discussion of appropriate ABL and surface parameterization schemes in general circulation models of the atmosphere that are being used for climate simulation.

This book is a captivating and highly informative guide to the techniques of being effective as a hunter with a modern

precision air rifle in today's countryside. *The Book of the 22* Crowood Press (UK) Ecotoxicological risk from multiple stressors covers any situation where organisms are exposed to a combination of environmental stressors. These include physical and chemical pollutants as well as other stressors such as parasites and environmental impact (e. g. , climate change or habitat loss). The combination of stressors can result in increased risk to organisms (either additive or synergistic effects) or decreased effects (protective or antagonistic effects). The multiple stressor challenge is an international, multi-disciplinary problem requiring an international, multi-disciplinary approach. The current approach to multiple stressors is to examine one stressor at a time and assume additivity. Little work has been done on combinations of stressors such that potential interactions can be determined. The problem is very complex. Multiple stressors pose a whole spectrum of challenges that range from basic science to regulation, policy and governance. The challenges raise fundamental questions about our understanding of the basic

---

biological response to stressors, as well as the implications of those uncertainties in environmental risk assessment and management. In addition to the great breadth, there is also great depth in the research challenges, largely due to the complexity of the issues. From a basic science point of view, many of the mechanisms and processes under investigation are at the cutting edge of science — involving new paradigms such as genomic instability and bystander effects.
